HYBRID TRANSMISSION SYSTEM

ON-VEHICLE INSPECTION

1. CHECK TRANSAXLE FLUID LEVEL
   NOTICE:
   • Insufficient or excessive amounts of transaxle oil may be the cause of some trouble.
   • Place the vehicle on level surface.
   • Use genuine ATF WS.
   (a) Remove the filler plug.
   (b) Ensure that the transaxle oil level is within 0 to 5 mm (0 to 0.20 in.) of the filler plug hole.
      NOTICE:
      Recheck the transaxle oil level after driving the vehicle when exchanging oil.
      HINT:
      Transaxle fluid quantity: 3.8 liters (4.0 US qts, 3.3 Imp. qts.)
   (c) Check for leaks if the quantity of oil is low.
   (d) Install the filler plug with a new gasket.
      Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

2. INSPECT OIL PRESSURE
   NOTICE:
   Perform the test at normal operating oil temperature 50 to 80°C (122 to 176°F).
   (a) Lift up the vehicle.
   (b) Remove the fluid pump cover plug and install SST.
      SST 09992-00095 (09992-00112, 09992-00271)
   (c) Set the blower switch to HI.
   (d) Turn the A/C switch on.
   (e) Push the power switch with the brake pedal depressed to start the engine (start the hybrid system).
   (f) Keeping the engine speed of 1,200 rpm, measure the oil pressure.
      Standard oil pressure:
      9.8 kPa (0.1 kgf/cm², 1.4 psi) or more
   (g) Install a new O-ring and fluid pump cover plug.
      Torque: 7.4 N*m (75 kgf*cm, 65 in.*lbf)
3. **INSPECT SHIFT LEVER**
   (a) Inspect the shift lever operation with the hybrid system operating.
      (1) Carry the key into the indoor electrical key oscillator detection area or insert the key in the key slot.
      (2) Turn the power switch ON (READY ON) while depressing the brake pedal. Check that the gear changes according to the shift operation pattern. If the check result is abnormal, replace the shift lever assembly.
      HINT: The shift operation pattern in power switch ON (READY ON) (when the vehicle is stopped) is shown below.
   (b) Turn the power switch OFF when the vehicle is stopped.

<table>
<thead>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
(c) Inspect the shift lever operation with the power switch's power mode ON (IG).
   (1) Carry the key into the indoor electrical key oscillator detection area or insert the key in the key slot.

(d) Turn the power switch ON (IG) without depressing the brake pedal.
   HINT:
   The power switch's power mode changes between OFF, ON (ACC) and ON (IG) each time the power switch is pressed.

(e) Check that the gear changes according to the shift operation pattern. If the check result is not as specified, replace the shift lever assembly.
   HINT:
   The shift operation pattern with the power switch's power mode ON (IG) is shown below.

<table>

**PRECAUTION**

1. **NOTICE FOR INITIALIZATION**
   When the cable of the negative (-) battery terminal is disconnected, initialize the following systems after the cable is reconnected.

2. **NOTICE FOR HYBRID SYSTEM ACTIVATION**
   - When the warning light is illuminated or the battery has been disconnected and reconnected, pressing the power switch may not start the system on the first try. If so, press the power switch again.
   - With the power switch's power mode changed to ON (IG), disconnect the battery. If the key is not in the key slot during reconnection, DTC B2799 may be output.

SYSTEM DESCRIPTION

1. SYSTEM DESCRIPTION
The electronic shift lever system electrically controls the parking lock mechanism by using the actuator. The transmission control ECU controls the shift control actuator, and also controls the entire system based on information from the hybrid vehicle control ECU. The transmission control ECU detects DTCs when there are any malfunctions in the system, and informs the driver of the malfunction by illuminating the P position switch indicator light and master warning light, and indicating an error message on the multi-display.

2. FUNCTION OF EACH COMPONENT

<table>
<thead>
<tr>
<th>Parts name</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shift Control Actuator</td>
<td>• Composed of the parking lock motor and the rotation angle sensor. The motor is activated by electric current from the transmission control ECU.</td>
</tr>
<tr>
<td></td>
<td>• Motor rotation is reduced by the cycloid reduction mechanism in the shift control actuator and then output.</td>
</tr>
<tr>
<td></td>
<td>• The rotation angle sensor detects the motor rotation angle with the 3 Hall ICs.</td>
</tr>
<tr>
<td>Transmission Control ECU</td>
<td>• This ECU activates the shift control actuator based on signals from the hybrid vehicle control ECU and the power source control ECU.</td>
</tr>
<tr>
<td></td>
<td>• This ECU controls the application timing of current to the parking lock motor based on signals from the rotation angle sensor.</td>
</tr>
<tr>
<td>Parking Lock Mechanism</td>
<td>The parking lock pawl rotates according to the movement of the parking lock rod when the parking lock motor rotates, and engages with the parking gear on the transaxle side, causing the parking lock mechanism to lock or unlock.</td>
</tr>
<tr>
<td>Hybrid Vehicle Control ECU</td>
<td>This ECU sends a P lock or P unlock demand signal to the transmission control ECU based on information from the selector lever and the P position switch.</td>
</tr>
<tr>
<td>Power Source Control ECU</td>
<td>This ECU sends a signal with power off information to the transmission control ECU. The transmission control ECU then sends the signal to the hybrid vehicle control ECU.</td>
</tr>
<tr>
<td>P Position Switch Indicator Light</td>
<td>This light comes on/goes off to indicate the P lock/unlock status and blinks to indicate a malfunction in the electronic shift lever system.</td>
</tr>
<tr>
<td>Combination Meter</td>
<td>A malfunction in the transmission control ECU is indicated by the illumination of the master warning light on the combination meter.</td>
</tr>
<tr>
<td>Multi-display</td>
<td>A malfunction in the transmission control ECU is indicated on the multi-display.</td>
</tr>
</tbody>
</table>
3. OPERATION DESCRIPTION

(a) Operation to switch to the P position:
(1) When the P position switch is turned on to activate parking lock, a signal is sent to the hybrid vehicle control ECU.
(2) The hybrid vehicle control ECU determines whether "P lock" is possible or not based on this signal and other vehicle information.
(3) If the hybrid vehicle control ECU determines that "P lock" is possible, it sends a "P lock" operation demand signal to the transmission control ECU.
(4) After receiving the signal, the transmission control ECU activates the shift control actuator in order to lock the parking lock mechanism, and turns on the P position switch indicator light.

(5) The transmission control ECU controls motor rotation angle based on signals from the rotation angle sensor in the shift control actuator.  

HINT:  
In the cycloid reduction mechanism, the output shaft is linked to the external gear. Together, they rotate only a single tooth when the eccentric adapter, which is linked to the motor, rotates once. Driving force is increased in this way so that the parking lock mechanism can be switched even when high output is required for parking on a hill, etc.
(b) Operation to switch to a non-P position:
(1) When the hybrid system is started (the vehicle is ready to be driven) and the selector lever is moved to the R, N, or the D position with the brake pedal depressed, a signal is sent to the hybrid vehicle control ECU.
(2) This signal is then sent from the hybrid vehicle control ECU to the transmission control ECU as a "P lock release" operation demand signal.
(3) After receiving the signal, the transmission control ECU activates the shift control actuator in order to unlock the parking lock mechanism, and turns off the P position switch indicator light.

(4) The transmission control ECU controls motor rotation angle based on signals from the rotation angle sensor in the shift control actuator.

4. SHIFT POSITION CHANGE FUNCTION
(a) The electronic shift lever system comprehensively determines vehicle conditions and changes the shift position, as shown in the following chart, by cooperating with the shift control function of the hybrid system (except when the reject function, described later, is in operation).
(b) Other than indicated in the following chart, when the power switch is turned OFF with the vehicle stopped, the shift position is automatically changed to the P position.

<table>
<thead>
<tr>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*: The vehicle cannot be driven because the hybrid system has not been started.

●: Current position  ➔: Positions to which the shift position can be changed
5. REJECT FUNCTION

(a) In the electronic shift lever system, there may be a situation in which a shift change cannot be done for safety reasons. When attempting to move the selector lever in such a situation, the system sounds a reject buzzer inside the meter and changes the shift position as shown in the following table.

<table>
<thead>
<tr>
<th>Shift operation which causes reject function to operate</th>

</table>
HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
• Use these procedures to troubleshoot the electronic shift lever system.
• *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

3 CHECK COMMUNICATION FUNCTION OF MULTIPLEX COMMUNICATION SYSTEM (BEAN)*

(a) Use the intelligent tester to check if the Multiplex Communication System (MPX) is functioning normally.

<table>
<thead>
<tr>
<th>Result</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>MPX DTC is not output</td>
<td>A</td>
</tr>
<tr>
<td>MPX DTC is output</td>
<td>B</td>
</tr>
</tbody>
</table>

B Go to MULTIPLEX COMMUNICATION SYSTEM

A

4 CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.

<table>
<thead>
<tr>
<th>Result</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAN DTC is not output</td>
<td>A</td>
</tr>
<tr>
<td>CAN DTC is output</td>
<td>B</td>
</tr>
</tbody>
</table>

B Go to CAN COMMUNICATION SYSTEM

A
5 CHECK FOR DTC*

(a) Check for DTCs and note any codes that are output.
(b) Delete the DTC.
(c) Recheck for DTCs. Based on the DTCs output above, try to force output of the electronic shift lever system DTC by simulating the operation indicated by the DTC.

Result

<table>
<thead>
<tr>
<th>Result</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>DTC is not output</td>
<td>A</td>
</tr>
<tr>
<td>DTC is output</td>

NEXT

8 REPAIR OR REPLACE

NEXT

END
PROBLEM SYMPTOMS TABLE

HINT:
• Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
• Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Electronic shift lever system

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Suspected area</th>

 DIAGNOSIS SYSTEM

1. DESCRIPTION
(a) Electronic shift lever system data and the Diagnostic Trouble Codes (DTCs) can be read in the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3
The vehicle uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

<table>
<thead>
<tr>
<th>Symbols (Terminal No.)</th>

</tr>
</tbody>
</table>

NOTICE:
*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:
Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch ON (IG) and attempt to use the tester. If the displays indicators that a communication error has occurred, there is a problem either with the vehicle or with the tester.

• If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
• If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.
DTC CHECK / CLEAR

1. CHECK DTC
   (a) Connect the intelligent tester to the DLC3.
   (b) Turn the power switch ON (IG).
   (c) Read the DTC by following the prompts on the tester screen.
       HINT:
       Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC
   (a) Connect the intelligent tester to the DLC3.
   (b) Turn the power switch ON (IG).
   (c) Erase the DTC by following the directions on the tester screen.
       HINT:
       Refer to the intelligent tester operator's manual for further details.
FREEZE FRAME DATA

1. CHECK FREEZE FRAME DATA
   (a) The vehicle status, stored during system operation or at the time of an error code detection, can be displayed by the intelligent tester.
   (b) Only one record of freeze frame data is stored and the freeze frame data generated during system operation are updated whenever the vehicle status is changed. After storing the DTC, the freeze frame data is not updated.

## FAIL-SAFE CHART

If the transmission control ECU detects a malfunction, the fail-safe functions shown in the table below are activated.

<table>
<thead>
<tr>
<th>DTC No.</th>
<th>Fail-safe Function</th>
<th>Problem Symptoms</th>
</tr>
</thead>
</table>
| C2300     | Only the P position release operation is possible and the shift control actuator is activated. | • The shift position is not indicated on the meter.  
           |                                                   | • Although the shift position is indicated on the meter, the vehicle cannot be driven. |
| C2301     |                                                   |                                                       |
| C2303     |                                                   | The battery is dead.                                   |
| C2304     | The transaxle parking lock control relay is turned off.                            | The parking lock mechanism cannot be switched.        |
| C2305     |                                                   |                                                       |
| C2306     |                                                   |                                                       |
| C2307     | The transaxle parking lock control relay is turned off.                            | • The shift position is not indicated on the meter.  
           |                                                   | • Although the shift position is indicated on the meter, the vehicle cannot be driven. |
| C2311     |                                                   | The parking lock mechanism cannot be switched.        |
| C2312     |                                                   | The hybrid system does not start up.                  |
| C2318     |                                                   | The parking lock mechanism cannot be switched on a hill. |
DATA LIST / ACTIVE TEST

1. READ DATA LIST
HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch ON (IG) and press the intelligent tester main switch on.
(c) Read the DATA LIST by following the directions on the tester screen.

**DIAGNOSTIC TROUBLE CODE CHART**

If a trouble code is displayed during the DTC check, check the circuit listed for that code in the table below and proceed to the appropriate page.

**HINT:**
- When the DTC C2300, C2301, C2304, C2305, C2306, C2307, C2311 and C2312 are detected, DTC P3102 indicating the electronic shift lever system malfunctions are detected for the hybrid system as well. Because of this, the hybrid system DTCs must be cleared after clearing the electronic shift lever system DTCs.
- Remove the P CON MAIN fuse to erase DTCs C2300, C2301, C2303, C2304, C2305, C2306 and C2307 because they cannot be erased with the intelligent tester.
- When a DTC is detected, the master warning light comes on and an error message is indicated on the multi-display.
- The indicator blinks quickly when it takes a long time to switch between the P position status and the P position release status.

</tbody>
</table>
DESCRIPTION
The shift control actuator consists of the parking lock motor and the rotation angle sensor. The transmission control ECU receives a P position switch signal from the hybrid vehicle control ECU and activates the parking lock motor by controlling current, causing the parking lock mechanism to switch. The transmission control ECU also detects the rotor rotation angle through the rotation angle sensor to control timing of current application to the coils. The transmission control ECU outputs this DTC when it detects a malfunction in the shift control actuator system.

INSPECTION PROCEDURE

1 CHECK OTHER DTC OUTPUT (BESIDES DTC C2300)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch ON (IG).
(c) Turn the intelligent tester on.
(d) Read the DTCs.

Result

<table>
<thead>
<tr>

NG

OK Go to step 5
3. **CHECK WIRE HARNESS (TRANSMISSION CONTROL ECU - SHIFT CONTROL ACTUATOR)**

- (a) Disconnect the T4 ECU connector.
- (b) Disconnect the S1 actuator connector.
- (c) Measure the resistance of the wire harness side connectors.

**Standard resistance**

<table>

**11 INSPECT SHIFT CONTROL ACTUATOR**

(a) Remove the 3 bolts and transmission case cover.
(b) Remove the 3 bolts.
(c) Slightly pull the shift control actuator from the hybrid vehicle transaxle so that the shift control actuator can be turned.
(d) Turn the shift control actuator.

**OK:**

The shift control actuator turns smoothly.

**HINT:**

There may be an internal actuator abnormality if the actuator does not turn smoothly.

**NG** REPLACE SHIFT CONTROL ACTUATOR

**OK**

REPLACE TRANSMISSION CONTROL ECU
HYBRID TRANSMISSION / TRANSAXLE – ELECTRONIC SHIFT LEVER SYSTEM

DESCRIPTION
The transmission control ECU receives a P position switch signal from the hybrid vehicle control ECU and then activates the shift control actuator. At the same time, the transmission control ECU detects the length of time it takes for the parking lock mechanism to switch. The transmission control ECU outputs this DTC when this length of time is longer than specification.

**REPLACE TRANSMISSION CONTROL ECU**
**DESCRIPTION**

The auxiliary battery voltage is constantly applied to terminal BATT. The terminal BATT voltage is used to power the transmission control ECU memory. The transmission control ECU outputs this DTC when it detects a malfunction related to terminal BATT.

<table>
<thead>
<tr>
<th>DTC No.</th>
<th>DTC Detection Condition</th>
<th>Trouble Area</th>
</tr>
</thead>
</table>
| C2310   | When both conditions below are met:  
• Power switch ON (IG)  
• Terminal BATT voltage of the transmission control ECU is 10 V or less for 1 second or more. |  
• P CON MAIN fuse  
• Transmission control ECU  
• Wire harness or connector |

**HINT:**

When there is an open or short in the BATT circuit, information on the actuator position ("P position" or "non-P position") stored in the ECU is cleared every time the power switch is turned OFF. Therefore, the ECU works to recognize the position each time the power switch is turned ON (IG). As a result, the time from when the power switch is turned ON (IG) until "READY ON" is indicated may become longer than normal.

<td>M11-5 - Body ground</td>
<td>9 to 14 V</td>
</tr>
</tbody>
</table>

OK  REPLACE P POSITION SWITCH

NG

REPAIR OR REPLACE HARNESS AND CONNECTOR
COOLANT

REPLACEMENT

1. REMOVE ENGINE UNDER COVER LH
2. REMOVE ENGINE UNDER COVER RH
3. DRAIN COOLANT
   (a) Remove the transaxle-side reserve tank cap.
   CAUTION:
   Do not remove the reserve tank cap while the engine is hot.
   (b) Remove the plug shown in the illustration and drain the coolant into a container.
   (c) Install the plug with a new gasket.
   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

4. ADD COOLANT
   (a) Loosen the bleeder plug shown in the illustration and connect a hose.
   NOTICE:
   Insert one end of the hose into the bleeder tank.
   (b) Add coolant until the level of coolant in the hose attached to the bleeder tank reaches the same level as the FULL line of the reserve tank.
   NOTICE:
   Add genuine Toyota Super LLC coolant.
   (c) Close the bleeder plug.
   (d) Turn the power switch ON (IG) and run the water pump for approximately 20 seconds.
   (e) Turn the power switch OFF. (1*)
   (f) Loosen the bleeder plug and bleed the air from the transaxle.
   (g) Add coolant into the bleeder tank. (*3)
   (h) Repeat the steps *1, *2 and *3.
   Standard:
   Water pump noise becomes softer and coolant circulation in reserve tank improves. Coolant system air bleeding is complete
HINT:
If air remains in the coolant system, the water pump noise becomes louder and the coolant circulation in the reserve tank becomes worse.

(i) Turn the power switch ON (IG) and run the water pump for approximately 5 minutes after completing air bleeding of the coolant system.

NOTICE:
Ensure that the bleeder plug is closed.

(j) Add coolant until the reserve tank is filled up to the FULL mark.

5. CHECK FOR ENGINE COOLANT LEAKAGE
(a) Check for engine coolant leakage (see page CO-9).
SHIFT CONTROL ACTUATOR

COMPONENTS

TRANSMISSION CASE COVER

16 (163, 12)

7.0 (71, 62 in.*lbf)

N*m (kgf*cm, ft.*lbf) : Specified torque

SHIFT CONTROL ACTUATOR ASSEMBLY
REMOVAL
1. REMOVE SHIFT CONTROL ACTUATOR ASSEMBLY
   (a) Disconnect the connector.
   (b) Remove the 3 bolts and transmission case cover from the hybrid vehicle transaxle.
   (c) Remove the 3 bolts and shift control actuator from the hybrid vehicle transaxle.

INSTALLATION
1. INSTALL SHIFT CONTROL ACTUATOR ASSEMBLY
   (a) Apply a small amount of ATF WS to the O-ring.
(b) Install the shift control actuator to the hybrid vehicle transaxle with the 3 bolts.
*Torque: 16 N·m (163 kgf·cm, 12 ft.lbf)*

(c) Install the transmission case cover to the hybrid vehicle transaxle with the 3 bolts.
*Torque: 7.0 N·m (71 kgf·cm, 62 in.lbf)*

(d) Connect the connector.
HYBRID VEHICLE TRANSAXLE ASSEMBLY

COMPONENTS

- INVERTER RESERVOIR TANK: 8.0 (82, 71 in.*lbf)
- INVERTER COVER: 21 (214, 15)
- INVERTER WITH CONVERTER ASSEMBLY
- ENGINE UNDER COVER RH
- ENGINE UNDER COVER LH

Specified torque:
- N°m (kgf°cm, ft.*lbf)

C129404ES01
ON-VEHICLE INSPECTION

1. INSPECT SPEED SENSOR (RESOLVER)

(a) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>A1 (GCS) - A4 (GCSG)</td>
<td>12.6 to 16.8 Ω</td>

<tr>
<td>All of terminals above - Transaxle housing</td>
<td>1 MΩ or higher</td>
</tr>
</tbody>
</table>

HINT:
The standard varies according to the sensor temperature. If the results are not as specified, replace the hybrid vehicle transaxle assembly.
REMOVAL

CAUTION:
• When working on the high voltage systems, always wear insulated gloves.
• Keep the removed service plug in your pocket to prevent other technicians from reconnecting it while you are servicing the vehicle.
• After removing the service plug grip, do not touch the high voltage connectors and terminals for 5 minutes.

NOTICE:
After removing the service plug grip, do not operate the power switch as it may damage the hybrid vehicle control ECU.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE SERVICE PLUG GRIP
   (a) Remove the service plug grip (see page HB-153).

3. REMOVE FRONT WHEEL

4. REMOVE ENGINE UNDER COVER LH

5. REMOVE ENGINE UNDER COVER RH

6. DRAIN COOLANT
   (a) Drain the coolant (see page HX-58).

7. DRAIN TRANSAXLE OIL
   (a) Drain the transaxle oil (see page HX-1).

8. REMOVE HOOD SUB-ASSEMBLY
   (a) Remove the hood (see page ED-2).

9. REMOVE FRONT WIPER ARM LH
   (a) Remove the front wiper arm LH (see page WW-13).

10. REMOVE FRONT WIPER ARM RH
    (a) Remove the front wiper arm RH (see page WW-13).

11. REMOVE COWL TOP FRONT PANEL SUB-ASSEMBLY OUTER
    (a) Remove the cowl top front panel (see page WW-13).

12. REMOVE INVERTER WITH CONVERTER ASSEMBLY
    (a) Remove the inverter with converter (see page HV-533).

13. REMOVE AIR CLEANER ASSEMBLY
    (a) Remove the air cleaner (see page ES-450).
14. DISCONNECT WIRE HARNESS
(a) Disconnect the 3 connectors shown in the illustration and the clamp.

(b) Disconnect the 2 clamps shown in the illustration.

(c) Disconnect the connector.
(d) Remove the 3 bolts and transmission case cover from the hybrid vehicle transaxle.

(e) Disconnect the 2 clamps.
15. DISCONNECT NO. 4 INVERTER COOLING HOSE
   (a) Remove the 4 clamps and disconnect the 3 hoses.

16. REMOVE FRONT DRIVE SHAFT ASSEMBLY
   (a) Remove the front drive shaft (see page DS-4).

17. DISCONNECT EXHAUST PIPE ASSEMBLY
   (a) Disconnect the exhaust pipe (see page EX-2).

18. REMOVE FRONT SUSPENSION CROSSMEMBER
     SUB-ASSEMBLY (See page EM-96)

19. SUSPEND ENGINE ASSEMBLY
   (a) Disconnect the 2 PCV hoses.
   (b) Install the No. 1 and No. 2 engine hangers in the
       correct direction.

       Parts No.:
       No. 1 engine hanger: 12281-22021
       No. 2 engine hanger: 12281-15040
       Bolt: 91512-B1016
       Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)
   (c) Attach an engine chain hoist to the engine hangers.

       CAUTION:
       Do not attempt to hang the engine by hooking
       the chain to any other parts.

20. SUPPORT HYBRID VEHICLE TRANSAXLE
     ASSEMBLY
   (a) Using a transmission jack, support the hybrid
       vehicle transaxle.

21. DISCONNECT NO. 3 ENGINE MOUNTING BRACKET
   (a) Remove the nut and disconnect the engine
       mounting bracket from the engine mounting
       insulator.

(f) Remove the bolt and ground wire.
22. REMOVE HYBRID VEHICLE TRANSAXLE ASSEMBLY
(a) Remove the 2 bolts, starter cover and housing side cover.

(b) Remove the 6 bolts and hybrid vehicle transaxle. **NOTICE:**
To avoid damage to the knock pin, do not pry the connecting portion of the HV transaxle and the engine.

23. REMOVE NO. 6 INVERTER COOLING HOSE
(a) Remove the clamp and inverter cooling hose.

24. REMOVE NO. 3 ENGINE MOUNTING BRACKET
(a) Remove the 3 bolts and engine mounting bracket.
(b) Remove the 6 bolts shown in the illustration and clamp.
CAUTION:
- When working on the high voltage systems, always wear insulated gloves.
- Keep the removed service plug in your pocket to prevent other technicians from reconnecting it while you are servicing the vehicle.
- After removing the service plug grip, do not touch the high voltage connectors and terminals for 5 minutes.

NOTICE:
After removing the service plug grip, do not operate the power switch as it may damage the hybrid vehicle control ECU.

1. INSTALL NO. 3 ENGINE MOUNTING BRACKET
   (a) Install the clump in the position shown in the illustration with the 6 bolts.
       Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   (b) Install the No. 3 engine mounting bracket with the 3 bolts.
       Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)
2. INSTALL NO. 6 INVERTER COOLING HOSE  
(a) Connect the inverter cooling hose and install the clamp.

3. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY  
(a) Install the hybrid vehicle transaxle with the 6 bolts.  
   Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)  
   NOTICE:  
   • Ensure that the knock pin is installed on the engine side.  
   • Place the HV transaxle in a horizontal position and Align the knock pin and its hole. Then tighten the 6 bolts in the positions shown in the illustration.  
(b) Install the housing side cover and starter cover with the 2 bolts.  
   Torque: 32 N*m (326 kgf*cm, 23 ft.*lbf)

4. INSTALL NO. 3 ENGINE MOUNTING BRACKET  
(a) Install the engine mounting bracket to the engine mounting insulator with the nut.  
   Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)

5. REMOVE NO. 1 ENGINE HANGER  
(a) Remove the bolt and engine hanger.

6. INSTALL FRONT SUSPENSION CROSSMEMBER SUB-ASSEMBLY (See page EM-106)

7. CONNECT EXHAUST PIPE ASSEMBLY  
(a) Connect the exhaust pipe (see page EX-3).

8. INSTALL FRONT DRIVE SHAFT ASSEMBLY  
(a) Install the front drive shaft (see page DS-15).
9. CONNECT NO. 4 INVERTER COOLING HOSE
   (a) Connect the 3 hoses with the 4 clamps.

10. CONNECT CONNECTOR
    (a) Connect the ground wire with the bolt.
        Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
    (b) Connect the 2 clamps.
    (c) Install the transmission case cover to the hybrid vehicle transaxle with the 3 bolts.
        Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
    (d) Connect the connector.
11. INSTALL AIR CLEANER ASSEMBLY  
(a) Install the air cleaner (see page ES-453).

12. INSTALL INVERTER WITH CONVERTER ASSEMBLY  
(a) Install with inverter converter (see page HV-535).

13. INSTALL COWL TOP FRONT PANEL SUB-ASSEMBLY OUTER  
(a) Install the cowl top front panel (see page WW-15).

14. INSTALL FRONT WIPER ARM RH  
(a) Install the front wiper arm (see page WW-16).

15. INSTALL FRONT WIPER ARM LH  
(a) Install the front wiper arm (see page WW-16).

16. INSTALL HOOD SUB-ASSEMBLY  
(a) Install the hood (see page ED-4).

17. ADJUST HOOD SUB-ASSEMBLY  
(a) Adjust the hood (see page ED-4).

18. INSTALL ENGINE UNDER COVER RH

19. INSTALL ENGINE UNDER COVER LH

20. INSTALL FRONT WHEEL

21. INSTALL SERVICE PLUG GRIP  
(a) Install the service plug grip (see page HB-154).

22. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

23. ADD TRANSAXLE OIL  
Fluid type:  
Toyota genuine ATF WS  
Standard capacity:  
3.8 liters (4.0 US qts, 3.3 Imp. qts)

24. INSPECT TRANSAXLE OIL  
(a) Inspect the transaxle oil (see page HX-1).

25. ADD COOLANT  
(a) Add the coolant (see page HX-58).

26. CHECK FOR ENGINE COOLANT LEAKAGE  
(a) Check for engine coolant leakage (see page CO-9).

(e) Connect the clamps in the 2 locations shown in the illustration.

(f) Connect the clamp and the 3 connectors shown in the illustration.
27. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
   (a) Inspect and adjust the front wheel alignment (see page SP-2).

28. **PERFORM CALIBRATION**
   (a) Perform calibration (see page PS-13).

29. **PERFORM INITIALIZATION**
   (a) Perform initialization (see page IN-32).

**NOTICE:**
Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.
HYBRID VEHICLE TRANSAXLE UNIT

COMPONENTS

- MOTOR WATER JACKET COVER
- NO. 3 ENGINE MOUNTING BRACKET
- SHIFT CONTROL ACTUATOR ASSEMBLY
- TRANSMISSION CASE COVER
- MANUAL DETENT SPRING
- MANUAL DETENT SPRING COVER
- PARKING COVER
- TRANSMISSION OIL SEAL LH
- MOTOR STATOR WIRING HARNESS CONNECTOR
- MOTOR REVOLUTION SENSOR WIRING HARNESS CONNECTOR
- SCREW PLUG
- GASKET
- O-RING
- OIL PUMP DRIVE SHAFT
- DRIVEN ROTOR
- DRIVE ROTOR
- OIL PUMP COVER
- OIL PUMP COVER PLUG

**Non-reusable part**: Specified torque

- Apply ATF WS
- Apply MP grease

N*m (kgf*cm, ft.*lbf): Specified torque
DISASSEMBLY

CAUTION:
• When working on the high voltage systems, always wear insulated gloves.
• Keep the removed service plug in your pocket to prevent other technicians from reconnecting it while you are servicing the vehicle.
• After removing the service plug grip, do not touch the high voltage connectors and terminals for 5 minutes.

NOTICE:
After removing the service plug grip, do not operate the power switch as it may damage the hybrid vehicle control ECU.

1. REMOVE HYBRID VEHICLE TRANSMISSION ASSEMBLY
   (a) Remove the hybrid vehicle transaxle (see page HX-66).

2. REMOVE HYBRID VEHICLE GENERATOR ASSEMBLY
   (a) Install the 2 engine hangers in the positions shown in the illustration.
   HINT:
   • Engine hanger: 12281-67070, S1228-11781
   • Bolt: 91642-81045, 91642-81265
   • Nut: 90178-10001, 90179-12147

   (b) Using an engine sling device and chain block, set the transaxle with the generator side facing upward.
   NOTICE:
   • Place the transaxle on wooden blocks or equivalent.
   • Fix the transaxle so that no excessive force is applied to the cable.
   (c) Remove the drain plug.

   (d) Remove the 21 bolts shown in the illustration.
   HINT:
   • 13 bolts on the generator side.
   • 8 bolts on the motor side.
(e) Disconnect the motor and generator by inserting a flat-head screwdriver in the position shown and prying the two apart.

**NOTICE:**

Be careful not to damage the two faces of each part.

(f) Using an engine sling device and chain block, raise the generator.

**HINT:**
Raise the generator approximately 30 to 40 mm (1.18 to 1.57 in.).

(g) Apply protective tape to the head of a flat-head screwdriver and use it to hold down the chain with input shaft while removing the generator.

3. **REMOVE COUNTER DRIVEN GEAR SUB-ASSEMBLY**
   (a) Remove the counter driven gear from the HV motor.

4. **REMOVE DIFFERENTIAL CASE ASSEMBLY**
   (a) Remove the differential case from the HV motor.
5. REMOVE TRANSMISSION DRIVE SPROCKET SUB-ASSEMBLY
   (a) Remove the thrust bearing race, thrust needle roller bearing and No. 1 thrust bearing race.
   HINT: The thrust bearing race may be attached to the generator side.
   (b) Remove the drive sprocket and chain.

6. REMOVE INPUT SHAFT ASSEMBLY
   (a) Remove the input shaft.

7. REMOVE PLANETARY RING GEAR
   (a) Remove the thrust bearing race, thrust needle roller bearing and No. 1 thrust bearing race.
   HINT: The thrust bearing race may be attached to the input shaft side.
   (b) Remove the planetary ring rear.
8. **REMOVE PLANETARY RING GEAR FLANGE**  
   (a) Remove the planetary ring gear flange and shim.

9. **REMOVE SPROCKET DRIVEN GEAR AND COUNTER DRIVE GEAR**  
   (a) Using a plastic-faced hammer, tap the motor case and remove the counter drive gear and shim.  
   **HINT:**  
   Remove the counter drive gear while pulling it vertically.

10. **FIX TRANSMISSION OIL STRAINER**  
    (a) Remove the bolt and oil strainer.

    (b) Remove the O-ring from the oil strainer.

11. **REMOVE HV MOTOR ASSEMBLY**  
    (a) Place the motor on wooden blocks or equivalent.
12. **REMOVE NO. 3 ENGINE MOUNTING BRACKET**
   (a) Remove the 3 bolts and mounting bracket.

13. **REMOVE MOTOR REVOLUTION SENSOR WIRING HARNESS CONNECTOR**
   (a) Remove the bolt and pull out the HV motor side motor revolution sensor wiring harness connector (gray).
   **NOTICE:**
   Do not pull on the connector any more than necessary.
   (b) Remove the connector and motor revolution sensor wiring harness connector (gray).

14. **REMOVE MOTOR STATOR WIRING HARNESS CONNECTOR**
   (a) Remove the bolt and pull out the motor stator wiring harness connector (black).
   **NOTICE:**
   Do not pull on the sensor connector any more than necessary.
   (b) Disconnect the connector and the motor stator wiring harness connector (black).

15. **REMOVE SHIFT CONTROL ACTUATOR ASSEMBLY**
   (a) Remove the 3 bolts and shift control actuator.

16. **REMOVE PARKING COVER**
   (a) Remove the 6 bolts and parking cover.
17. **REMOVE MANUAL DETENT SPRING SUB-ASSEMBLY**
   (a) Remove the bolt, manual detent spring cover and manual detent spring.

18. **REMOVE MOTOR WATER JACKET COVER**
   (a) Remove the 6 bolts and motor water jacket cover.

19. **REMOVE PARKING SHAFT COVER**
   (a) Remove the 5 bolts and parking shaft cover.

20. **REMOVE TRANSMISSION OIL PUMP COVER SUB-ASSEMBLY**
   (a) Remove the oil pump cover plug and O-ring.

   (b) Remove the 5 bolts and oil pump cover.
21. REMOVE OIL PUMP DRIVE SHAFT
(a) Remove the oil pump drive rotor and oil pump driven rotor.
(b) Remove the oil pump drive shaft.

22. REMOVE DIFFERENTIAL CASE LH TAPERED ROLLER BEARING RACE
(a) Using SST, tap out the differential case tapered roller bearing LH outer race and shim.
   SST 09308-00010

23. REMOVE HYBRID TRANSMAXLE OIL SEAL LH
(a) Place the motor on wooden blocks or equivalent.
   NOTICE:
   Make sure that the parking lock rod does not contact the wooden blocks.
24. REMOVE TRANSAXLE HOUSING AND CASE WITH HEAD STRAIGHT SCREW PLUG
   (a) Remove the 2 set plugs and gasket.
   (b) Using a 10 mm hexagon wrench, remove the screw plugs.

25. FIX HYBRID VEHICLE GENERATOR ASSEMBLY
   (a) Place the generator on wooden blocks or equivalent.

26. REMOVE POWER CABLE COVER
   (a) Remove the breather plug.
   (b) Remove the 4 bolts and power cable cover.
27. REMOVE GENERATOR CABLE
   (a) Remove the 5 bolts and generator cable.

28. REMOVE GENERATOR MOTOR REVOLUTION SENSOR WIRING HARNESS CONNECTOR
   (a) Remove the bolt and pull out the HV generator side generator revolution sensor wiring harness connector.
   NOTICE:
   Do not pull on the sensor connector any more than necessary.
   (b) Disconnect the connector and the HV generator side generator revolution sensor wiring harness connector.

29. REMOVE TRANSAXLE HOUSING TUBE CONNECTOR

30. REMOVE HYBRID VEHICLE TRANSAXLE ASSEMBLY TYPE T OIL SEAL
   (a) Using SST, remove the oil seal.
   SST  09612-30012

31. REMOVE HYBRID TRANSAXLE OIL SEAL RH
   (a) Using SST, tap out the oil seal.
   SST  09308-00010
32. **REMOVE DIFFERENTIAL CASE RH TAPERED ROLLER BEARING RACE**  
(a) Using SST, tap out the differential case tapered roller bearing LH outer race.  
SST 09308-00010

33. **REMOVE TRANSAXLE HOUSING AND CASE WITH HEAD STRAIGHT SCREW PLUG**  
(a) Remove the set plug and gasket.  
(b) Using a 6 mm socket wrench, remove the screw plug.

**INSPECTION**

1. **INSPECT HV MOTOR ASSEMBLY**  
(a) Inspect the inside diameter of the rotor bush.  
(1) Using a caliper gauge, measure the inside diameter of the motor rotor bush.  
**Standard diameter:**  
20.025 to 20.046 mm (0.7884 to 0.7892 in.)  
**Maximum diameter:**  
20.096 mm (0.7912 in.)  
**NOTICE:**  
Take the measurement in different locations and use the average of the measurements taken.  
If the inside diameter exceeds the maximum, replace the motor assembly with a new one.

**REASSEMBLY**

1. **INSTALL TRANSAXLE HOUSING AND CASE WITH HEAD STRAIGHT SCREW PLUG**  
(a) Install a new gasket and the set plug.  
**Torque:** 39 N*m (400 kgf*cm, 29 ft.*lbf)  
(b) Apply liquid sealant 1344 to the first 2 to 3 threads from the end of the screw plug.  
**NOTICE:**  
Clean and degrease the screw and screw hole.  
(c) Using a 6 mm socket hexagon wrench, install the screw plug.  
**Torque:** 13 N*m (130 kgf*cm, 9 ft.*lbf)
2. INSTALL TRANSAXLE HOUSING AND CASE WITH HEAD STRAIGHT SCREW PLUG
   (a) Install a new gasket and the set plug.
   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)
   HINT:
   Tighten the set plug after adding transaxle oil.
   (b) Apply liquid sealant 1324 to the first 2 to 3 threads from the end of the screw plug.
   NOTICE:
   Clean and degrease the screw and screw hole.
   (c) Using a 10 mm socket hexagon wrench, install the screw plug.
   Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)

3. INSTALL HYBRID TRANSAXLE OIL SEAL RH
   (a) Using SST, tap in a new oil seal.
   Oil seal depth:
   \[ 2.7 \pm 0.5 \text{ mm} (0.106 \pm 0.020 \text{ in.}) \]
   (b) Coat the lip of the oil seal with No. 2 MP grease.
   SST 09350-32014 (09351-32130, 09351-32150), 09950-70010 (09951-07100)

4. INSTALL HYBRID TRANSAXLE TYPE T OIL SEAL LH
   (a) Place the motor on wooden blocks or equivalent.
   NOTICE:
   Make sure that the parking lock rod does not contact the wooden blocks.
   (b) Using SST, tap in the oil seal.
   Standard depth:
   \[ 2.7 \pm 0.5 \text{ mm} (0.106 \pm 0.020 \text{ in.}) \]
   (c) Coat the lip of the oil seal with MP grease.
   SST 09350-32014 (09351-32130, 09351-32150), 09950-70010 (09951-07100)
5. ADJUST PRELOAD

(a) Adjust the differential case preload.

(1) Place the motor on wooden blocks or equivalent.

NOTICE:
- Place the motor horizontally.
- Excessive force should not be applied to the cable.

(2) Using SST, tap in the differential case tapered roller bearing LH outer race and shim to the motor.

SST 09950-60020 (09951-00680), 09950-70010 (09951-07100)

NOTICE:
Replace the shim and outer race with new ones if they are deformed or damaged.

(3) Using SST, tap in the differential case tapered roller bearing RH outer race to the generator.

SST 09950-60020 (09951-00680), 09950-70010 (09951-07100)

NOTICE:
Replace the outer race with a new one if it is deformed or damaged.

(4) Apply ATF WS to the sliding surfaces of the differential case tapered roller bearing and install the bearing to the motor.
5) Using an engine sling device and chain block, install the motor to the generator.
HINT:
• Engine hanger: 12281-67070, S1228-11781
• Bolt: 91642-81045, 91642-81265
• Nut: 90178-10001, 90179-12147

6) Tighten the 13 bolts in the positions shown in the illustration.
   Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)

7) Using SST, rotate the differential case in both directions to stabilize the bearings.
   SST  09564-32011

8) Using SST, measure the differential preload of the differential case and rotation torque.
   SST  09564-32011
   Standard preload (Starting torque):
   0.98 to 1.57 N*m (9.99 to 16.01 kgf*cm, 8.67 to 13.90 in.*(lb)) for new bearing
   0.49 to 0.78 N*m (5.00 to 7.95 kgf*cm, 4.34 to 6.90 in.*(lb)) for reused bearing
   Standard preload (Turning torque):
   0.61 to 1.35 N*m (20 rpm) at 20°C (6.2 to 13.77 kgf*cm, 5.4 to 11.95 in.*lb)
HINT:
• If the preload is not within the specified range, replace the shim with a new one to adjust the preload.
• Remove the motor side tapered roller bearing outer race and shim when replacing the shim.
• Replace the shim and outer race with new ones if they are deformed or damaged.
• As the shim thickness is increased 0.02 mm (0.0008 in.), the preload increases approximately 0.23 N*m (2.4 kgf*cm, 2.04 in.*lb) accordingly.

**Standard shim thickness**

</table>

(9) Using an engine sling device and chain block, remove the 13 bolts and generator.
6. **INSTALL DIFFERENTIAL DRIVE PINION**
   (a) Install the differential drive pinion.

   **NOTICE:**
   - Insert the differential drive pinion vertically.
   - Ensure that the differential drive pinion is fully inserted.

7. **SELECT SHIM**
   (a) Select the input shaft shim.
   (1) Install the No. 1 thrust bearing race.
   (2) Apply ATF WS to the sliding surfaces of the thrust needle roller bearing and install the flange bearing.
   (3) Install the thrust bearing race.
   (4) Install the drive sprocket.
   (5) Install the input shaft.
   (6) Install the No. 1 thrust bearing race.
   (7) Apply ATF WS to the sliding surfaces of the thrust needle roller bearing and install the flange bearing.
   (8) Install the thrust bearing race.
9) Install the planetary ring gear.

10) Install the planetary ring gear flange.
(11) Using a straightedge and vernier caliper, measure dimension A as shown in the illustration.

**Standard value:**
Dimension A = Measured value - width of straightedge used

**NOTICE:**
- Measure dimension A without the shim installed.
- Take the measurement 3 times each in 3 different locations and use the average of the measurements taken.
- Two people are required for this step because it is difficult to keep the straightedge level. One person should hold the straightedge, and the other person measure dimension A.

(12) Using a straightedge and vernier caliper, measure dimension B as shown in the illustration.

**Standard value:**
Dimension B = Measured value - thickness of straightedge used

**NOTICE:**
Dimension B is greater than dimension A.

(13) Select a shim.

**Standard value:**
Select shim = (Dimension B - Dimension A) - 0.1 mm (0.0039 in.) to 0.4 mm (0.0157 in.)

**NOTICE:**
Subtract 0.1 mm (0.004 in.) to 0.4 mm (0.016 in.) from the difference of Dimension B and Dimension A and select a shim on the basis of the resulting value. This is done because clearance 0.1 mm (0.004 in.) to 0.4 mm (0.016 in.) with the input shaft is required.

**Standard shim thickness**

(b) Select a counter drive gear shim.

1. Install the counter drive gear.

**NOTICE:**
- Insert the counter drive gear vertically.
- Ensure that the counter drive gear is fully inserted.

2. Using a straightedge and vernier caliper, measure dimension A as shown in the illustration.

**Standard value:**

\[
\text{Dimension A} = \text{Measured value} - \text{width of straightedge used}
\]

**NOTICE:**
- Measure dimension A without the shim installed.
- Take the measurement 3 times each in 3 different locations and use the average of the measurements taken.
- Two people are required for this step because it is difficult to keep the straightedge level. One person should hold the straightedge, and the other person measure dimension A.

3. Using a straightedge and vernier caliper, measure dimension B as shown in the illustration.

**Standard value:**

\[
\text{Dimension B} = \text{Measured value} - \text{thickness of straightedge used}
\]

**NOTICE:**
- Dimension B is greater than dimension A.

4. Select a shim.

**Standard value:**

\[
\text{Selected shim} = (\text{Dimension B} - \text{Dimension A}) - 0 \text{ mm (0 in.) to 0.1 mm (0.004 in.)}
\]

**NOTICE:**
- Subtract 0 mm (0 in.) to 0.1 mm (0.004 in.) from the difference of Dimension B and Dimension A and select a shim on the basis of the resulting value. This is done because clearance 0 mm (0 in.) to 0.1 mm (0.004 in.) with the counter drive gear is required.

HYBRID TRANSMISSION / TRANSAXLE – HYBRID VEHICLE TRANSAXLE UNIT

HX–95

8. INSTALL INPUT SHAFT ASSEMBLY
   (a) Install the shim selected.

   (b) Install the planetary ring gear flange.
   (c) Install the thrust bearing race.
   (d) Install the thrust needle roller bearing.
       (1) Apply ATF WS to the sliding surfaces of the thrust needle roller bearing and install the flange.
   (e) Install the thrust bearing race.

   (f) Install the planetary ring gear.

   (g) Install the input shaft.
9. INSTALL SPROCKET DRIVEN GEAR AND COUNTER DRIVE GEAR
   (a) Install the counter drive gear shim selected.

   (b) Install the counter drive gear and chain.
   NOTICE:
   • Insert the counter drive gear vertically.
   • Ensure that the counter drive gear is fully inserted.

10. INSTALL TRANSMISSION DRIVE SPROCKET SUB-ASSEMBLY
    (a) Apply ATF WS auto fluid to the drive sprocket needle roller bearing and put the drive sprocket on the chain.
    (b) Align the recesses of the planetary ring gear and the drive sprocket and install the drive sprocket with chain.

11. INSTALL NO. 2 THRUST BEARING RACE
    (a) Install the thrust bearing race.
    (b) Install the No. 1 drive sprocket thrust needle roller bearing.
        (1) Apply ATF WS to the sliding surfaces of the thrust needle roller bearing and install the bearing.
    (c) Install the No. 2 thrust bearing race.

12. INSTALL TRANSMISSION OIL STRAINER
    (a) Apply ATF WS to a new O-ring and install the fluid strainer.
13. INSTALL HYBRID VEHICLE GENERATOR ASSEMBLY

(a) Apply seal packing in a continuous line of beads (diameter 1.5 mm 0.059 in.) to the motor side.
Seal packing:
Toyota Genuine Seal Packing 1281,
Three Bond 1281 or Equivalent
NOTICE:
• Clean and degrease the installation surfaces.
• Install within 10 minutes of applying seal packing.

(b) Using an engine sling device and chain block, install the parking lock rod to the generator so that it is inserted into the cam guide sleeve.
NOTICE:
Rotate the input shaft in both directions so that the gears interlock if the generator cannot be easily installed.

(c) Apply adhesive to the first 2 to 3 threads of the bolt end.
Adhesive:
Toyota Genuine Adhesive 1344,
Three Bond 1344 or Equivalent
NOTICE:
Clean and degrease the bolt and bolt holes.

(d) Install the 21 bolts as shown in the illustration.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)
HINT:
• 13 bolts on the generator side
14. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY TYPE T OIL SEAL
   (a) Coat the lip of a new oil seal with MP grease. 
   NOTICE: 
   Ensure that no foreign objects adhere to the oil 
   seal lip. 
   (b) Using SST, tap in oil seal. 
   Standard depth: 
   1 to 1.5 mm (0.039 to 0.059 in.) 
   NOTICE: 
   Ensure that the oil seal is fitted straight.

15. FIX HYBRID VEHICLE TRANSAXLE ASSEMBLY
   (a) Set the hybrid transaxle as shown in the illustration.

16. INSTALL PARKING COVER
   (a) Apply seal packing in a continuous line of beads 
   (diameter 1.5 mm, 0.06 in.) as shown in the 
   illustration. 
   Seal packing: 
   Toyota Genuine Seal Packing 1281, 
   Three Bond 1281 or Equivalent 
   NOTICE: 
   • Clean and degrease the installation surfaces. 
   • Install within 10 minutes of applying seal 
   packing. 
   (b) Install the parking shaft cover with the 5 bolts. 
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
17. INSTALL MOTOR WATER JACKET COVER
   (a) Apply seal packing black in a continuous line of beads (diameter 1.5 mm, 0.06 in.) as shown in the illustration.

   Seal packing:
   - Toyota Genuine Seal Packing 1281,
   - Three Bond 1281 or Equivalent

   NOTICE:
   - Clean and degrease the installation surfaces.
   - Install within 10 minutes of applying seal packing.

   (b) Apply adhesive to the first 2 to 3 threads of each of the 6 bolts. Install the motor water jacket cover with the 6 bolts.

   Adhesive:
   - Toyota Genuine Adhesive 1344,
   - Three Bond 1344 or Equivalent

   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

   NOTICE:
   Clean and degrease the bolt and bolt holes.

18. INSTALL TRANSAXLE HOUSING TUBE CONNECTOR
   (a) Apply adhesive to the first 2 to 3 threads of the bolt and install.

   Adhesive:
   - Toyota Genuine Adhesive 1344,
   - Three Bond 1344 or Equivalent

   Torque: 15 N*m (155 kgf*cm, 11 ft.*lbf)

   NOTICE:
   Clean and degrease the bolt and bolt holes.

   (b) Install the drain plug using a new gasket.

   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

19. INSTALL MANUAL DETENT SPRING SUB-ASSEMBLY
   (a) Install the manual detent spring and manual detent spring cover with the bolt.

   Torque: 9.8 N*m (100 kgf*cm, 86 in.*lbf)
20. REMOVE PARKING COVER
   (a) Apply seal packing in a continuous line of beads (diameter 1.5 mm, 0.06 in) as shown in the illustration.

   Seal packing:
   - Toyota Genuine Seal Packing 1281,
   - Three Bond 1281 or Equivalent

   NOTICE:
   - Clean and degrease the installation surfaces.
   - Install within 10 minutes of applying seal packing.

   (b) Install the parking cover with the 6 bolts.
   Torque: 5.5 N\(\text{m}\) (56 kgf\(\cdot\)cm, 49 in.\(\cdot\)lb)

21. INSTALL SHIFT CONTROL ACTUATOR ASSEMBLY
   (a) Apply a small amount of genuine ATF WS to the O-ring.

   (b) Install the shift control actuator with the 3 bolts.
   Torque: 16 N\(\text{m}\) (160 kgf\(\cdot\)cm, 12 ft.\(\cdot\)lb)

   (c) Install the transmission case cover with the 3 bolts.

22. INSTALL OIL PUMP DRIVE SHAFT
   (a) Apply ATF WS to the fluid pump drive shaft and install it.
23. INSTALL OIL PUMP DRIVEN ROTOR
   (a) Apply ATF WS to the fluid pump driven rotor and install it.

24. INSTALL TRANSAXLE OIL PUMP DRIVE ROTOR
   (a) Apply ATF WS to the transaxle fluid pump drive rotor and install it.

25. INSTALL TRANSMISSION OIL PUMP COVER SUB-ASSEMBLY
   (a) Install a new O-ring.
      **NOTICE:**
      Ensure that the O-ring is not twisted.
   (b) Apply adhesive to the first 2 to 3 threads of the bolt end.
      **Adhesive:**
      Toyota Genuine Adhesive 1344,
      Three Bond 1344 or Equivalent
      **NOTICE:**
      Clean and degrease the bolts and bolt holes.
   (c) Install the oil pump cover with the 5 bolts.
      **Torque:** 5.5 N·m (56 kgf·cm, 49 in.*lbf)
   (d) Install a new O-ring and fluid pump cover plug.
26. INSTALL MOTOR STATOR WIRING HARNESS CONNECTOR
(a) Apply ATF WS to the O-ring and install the motor stator wiring harness connectors (black) with the bolt.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)

27. INSTALL MOTOR REVOLUTION SENSOR WIRING HARNESS CONNECTOR
(a) Apply ATF WS to the O-ring and install the HV motor side motor revolution sensor wiring harness connectors (gray) with the bolt.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)

28. INSTALL GENERATOR MOTOR REVOLUTION SENSOR WIRING HARNESS CONNECTOR
(a) Apply ATF WS to the O-ring and install the HV generator side generator motor revolution sensor wiring harness connector with the bolt.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf)

29. INSTALL GENERATOR CABLE
(a) Align the generator cables as shown in the illustration and connect them.
NOTICE:
• Aligning the letters U, V and W, and connect the cable.
• Apply a small amount of ATF WS to the O-ring.
(b) Apply adhesive to the first 2 or 3 threads of bolts B and install the generator cable with the bolts.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lbf) (bolt B)
Adhesive:
Toyota Genuine Adhesive 1344,
Three Bond 1344 or Equivalent
NOTICE:
Clean and degrease the bolts and bolt holes.
(c) Install the generator cable with the 3 bolts (A).
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf) (bolt A)
30. INSTALL POWER CABLE COVER
   (a) Apply seal packing in a continuous line of beads (diameter 1.5 mm 0.06 in.) as shown in the illustration.
   Seal packing:
   Toyota Genuine Seal Packing 1281,
   Three Bond 1281 or Equivalent
   NOTICE:
   • Clean and degrease the installation surfaces.
   • Install within 10 minutes of applying seal packing.
   (b) Apply adhesive to the first 2 or 3 threads of the 4 bolts and install the power cable cover.
   Adhesive:
   Toyota Genuine Adhesive 1344,
   Three Bond 1344 or Equivalent
   Torque: 4.8 N*m (49 kgf*cm, 42 in.*lbf)
   NOTICE:
   Clean and degrease the bolts and bolt holes.

31. INSTALL NO. 3 ENGINE MOUNTING BRACKET
   (a) Apply adhesive to the first 2 or 3 threads of the 3 bolts and install the engine mounting bracket.
   Adhesive:
   Toyota Genuine Adhesive 1344,
   Three Bond 1344 or Equivalent
   Torque: 52 N*m (530 kgf*cm, 38 ft.*lbf)
   NOTICE:
   Clean and degrease the bolts and bolt holes.

32. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY
INPUT SHAFT

COMPONENTS

- No. 1 Input shaft thrust bearing race
- Input shaft thrust needle roller No. 1 bearing
- Input shaft assembly
- No. 2 Input shaft thrust bearing race
- Planetary sun gear sub-assembly

Apply ATF WS
DISASSEMBLY

1. REMOVE PLANETARY SUN GEAR SUB-ASSEMBLY
   (a) Remove the planetary sun gear from the input shaft.

2. REMOVE INPUT SHAFT THRUST BEARING RACE
   (a) Float the input shaft thrust bearing race using a thin flat-head screwdriver if it is attached to the planetary sun gear.
   (b) Remove the 2 input shaft thrust bearing races and input shaft thrust needle roller bearing.
INSPECTION

1. INSPECT PLANETARY SUN GEAR SUB-ASSEMBLY
   (a) Ensure that there is no damage or color change in the bush.
   (b) Using a caliper gauge, inspect the internal diameter of the planetary gear.

   Maximum diameter:
   25.596 mm (1.0077 in.)

   NOTICE:
   Measure the diameter in a number of locations and use the average of the measurements taken.

   HINT:
   Replace the planetary sun gear with a new one if the measurement exceeds the maximum diameter.

2. INSPECT INPUT SHAFT THRUST NEEDLE ROLLER NO. 1 BEARING
   (a) Ensure that there is no abnormal wear or discoloration in the bearing.

   HINT:
   Replace the input shaft thrust needle roller bearing with a new one if there is abnormal wear or discoloration.

REASSEMBLY

1. INSTALL INPUT SHAFT THRUST BEARING RACE
   (a) Apply ATF WS to the sliding surfaces of the bearing and install the 2 input shaft thrust bearing races and input shaft thrust needle roller bearing.
2. **INSTALL PLANETARY SUN GEAR SUB-ASSEMBLY**  
(a) Apply ATF WS to the bush and install the planetary sun gear to the input shaft.
SPROCKET DRIVEN GEAR AND COUNTER DRIVE GEAR

COMPONENTS

COUNTER DRIVE GEAR RADIAL BALL BEARING
COUNTER DRIVE GEAR
COUNTER DRIVE GEAR RADIAL BALL BEARING
DISASSEMBLY

1. REMOVE COUNTER DRIVE GEAR RADIAL BALL BEARING
   (a) Using SST and a press, press out the bearing from the counter drive gear.
   SST 09950-00020, 09950-60010 (09951-00330), 09950-70010 (09951-07100)

   (b) Using SST and a press, press out the bearing from the counter drive gear.
   SST 09950-00020, 09950-60010 (09951-00330), 09950-70010 (09951-07100)
INSPECTION

1. INSPECT COUNTER DRIVE GEAR RADIAL BALL BEARING
   (a) Check the bearing for abnormal wear or discoloration.
   HINT:
   Replace the bearing with a new one if abnormal wear or discoloration is found.
REASSEMBLY

1. INSTALL COUNTER DRIVE GEAR RADIAL BALL BEARING
   (a) Apply ATF WS to the 2 bearings.
   (b) Using SST and a press, press in the bearing to the counter drive gear.
       SST 09950-60010 (09951-00330, 09951-00460), 09950-70010 (09951-07100)
   (c) Using SST and a press, press in the bearing to the counter drive gear.
       SST 09950-60010 (09951-00330, 09951-00460), 09950-70010 (09951-07100)
DIFFERENTIAL DRIVE PINION

COMPONENTS

COUNTER DRIVE GEAR RADIAL BALL BEARING

DIFFERENTIAL DRIVE PINION

COUNTER DRIVE GEAR RADIAL BALL BEARING

\[ N\cdot m \text{ (kgf\cdot cm, ft.\cdot lb)} \]: Specified torque

● Non-reusable part

👉 Apply ATF WS
DISASSEMBLY

1. REMOVE COUNTER DRIVE GEAR RADIAL BALL BEARING
   (a) Loosen the staked part of the nut.

   (b) Set the differential drive pinion in a vise and remove the nut using a deep socket wrench.
       HINT:
       Set the drive pinion in a vise as shown in the illustration.

   (c) Using SST and a press, press out the bearing from the differential drive pinion.
       SST  09527-10011, 09950-00020, 09950-60010 (09951-00360), 09950-70010 (09951-07100)

   (d) Using SST and a press, press out the bearing from the differential drive pinion.
       SST  09527-10011, 09950-00020, 09950-60010 (09951-00360), 09950-70010 (09951-07100)
INSPECTION
1. INSPECT COUNTER DRIVE GEAR RADIAL BALL BEARING
   (a) Check the bearing for abnormal wear or discoloration.
   HINT:
   Replace the bearing with a new one if abnormal wear or discoloration is found.

REASSEMBLY
1. INSTALL COUNTER DRIVE GEAR RADIAL BALL BEARING
   (a) Using SST and a press, press in the bearing to the differential drive pinion.
   SST  09608-06041

   (b) Using SST and a press, press in the bearing to the differential drive pinion.
   SST  09608-06041, 09950-60010 (09951-00370)

   (c) Set the differential drive pinion in a vise and tighten a new nut using a deep socket wrench.
   Torque: 280 N\*m (2,860 kgf\*cm, 207 ft.*lbf)
   HINT:
   Set the vise as shown in the illustration.

   (d) Stake the nut.
TRANSMISSION DRIVE SPROCKET

COMPONENTS

- SNAP RING
- SPACER
- NO. 2 DRIVE SPROCKET NEEDLE ROLLER BEARING
- TRANSMISSION DRIVE SPROCKET SUB-ASSEMBLY

Apply ATF WS
DISASSEMBLY
1. REMOVE TRANSMISSION DRIVE SPROCKET SUB-ASSEMBLY
   (a) Using a thin screwdriver, pry out the snap ring from the transmission drive sprocket.

   (b) Remove the spacer and the needle roller bearing from the transmission drive sprocket.

INSPECTION
1. INSPECT NO. 2 DRIVE SPROCKET NEEDLE ROLLER BEARING
   (a) Check the bearing for abnormal wear or discoloration.
   HINT: Replace the needle roller bearing with a new one if abnormal wear or discoloration is found.

REASSEMBLY
1. INSTALL TRANSMISSION DRIVE SPROCKET SUB-ASSEMBLY
   (a) Apply ATF WS to the sliding surfaces of the bearing and install the needle roller bearing to the transmission drive sprocket.
   (b) Install the spacer to the transmission drive sprocket.
   (c) Using a thin screwdriver, install the snap ring to the transmission drive sprocket.

STRAIGHT PIN

PINION GEAR

PINION THRUST WASHER

Apply ATF WS
DISASSEMBLY

1. REMOVE DIFFERENTIAL CASE LH TAPERED ROLLER BEARING
   (a) Set the differential case in a vise.
   (b) Using SST, remove the bearing RH from the differential case.
   SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09958-04010)
   NOTICE: Apply oil or equivalent to the ends and screw portions of SST.

2. REMOVE DIFFERENTIAL CASE RH TAPERED ROLLER BEARING
   (a) Set the differential case in a vise.
   (b) Using SST, remove the bearing LH from the differential case.
   SST 09950-40011 (09951-04010, 09952-04010, 09953-04020, 09954-04010, 09955-04061, 09958-04010)

3. REMOVE DIFFERENTIAL CASE
   (a) Set the differential case in a vise.
   (b) Tap out the straight pin from the differential case with a 5 mm pin punch.
   (c) Remove the following parts from the differential case.

<table>
<thead>
<tr>

</table>
INSPECTION

1. INSPECT DIFFERENTIAL CASE TAPERED ROLLER BEARING
   (a) Check the bearing for abnormal wear or discoloration.
   HINT:
   Replace the bearing with a new one if abnormal wear or discoloration is found.

REASSEMBLY

1. INSTALL DIFFERENTIAL CASE
   (a) Apply ATF WS to the side gear thrust washer and install it to the side gear.
   (b) Apply ATF WS to the side gear thrust washer and install it to the pinion.
   (c) Install the side gear and pinion to the differential case.
   (d) Install the pinion shaft to the differential case so that the straight pin holes of the pinion shaft and differential case are aligned.
   (e) Set the pinion side and inspect the side gear backlash.
   **Standard backlash:**
   0.05 to 0.20 mm (0.0020 to 0.0079 in.)
   HINT:
   • Replace the side gear thrust washers with the same size for both the right and left side gears if the value is outside the specified range.
   • Ensure that rotation is smooth if side gear backlash is within the specified range.
   If the backlash exceeds the specified range, replace the side gear thrust washer with thinner one.
   If the backlash is less than the specified range, replace the side gear thrust washer with thicker one.
   **Standard side gear thrust washer thickness**

</tbody>
</table>

(f) Using a 5 mm pin punch, tap in the straight pin to the differential case.
(g) Using a chisel, caulk the external circumference of the differential case straight pin hole.

2. INSTALL DIFFERENTIAL CASE RH TAPERED ROLLER BEARING
   (a) Using SST and a press, press in the bearing RH to the differential case.
   SST 09710-22021 (09710-01031), 09950-70010 (09951-07100)
   HINT:
   There are 24 bearing rollers in bearing RH.

3. INSTALL DIFFERENTIAL CASE LH TAPERED ROLLER BEARING
   (a) Using SST and a press, press in the bearing LH to the differential case.
   SST 09710-22021 (09710-01031), 09950-70010 (09951-07100)
   HINT:
   There are 22 bearing rollers in bearing LH.
GENERATOR CABLE

REMOVAL

CAUTION:
• When working on the high voltage systems, always wear insulated gloves.
• Keep the removed service plug in your pocket to prevent other technicians from reconnecting it while you are servicing the vehicle.
• After removing the service plug grip, do not touch the high voltage connectors and terminals for 5 minutes.

NOTICE:
After removing the service plug grip, do not operate the power switch as it may damage the hybrid vehicle control ECU.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

2. REMOVE SERVICE PLUG GRIP
   (a) Remove the service plug grip (see page HB-153).

3. REMOVE ENGINE UNDER COVER LH

4. REMOVE ENGINE UNDER COVER RH

5. DRAIN COOLANT
   (a) Drain coolant (see page HX-58).

6. REMOVE FRONT COWL TOP PANEL OUTER SUB-ASSEMBLY
   (a) Remove the cowl top front panel (see page FU-12).

7. REMOVE INVERTER WITH CONVERTER ASSEMBLY
   (a) Remove the inverter with converter (see page HV-530).

8. REMOVE GENERATOR CABLE
   (a) Check that there is no voltage.
   CAUTION:
   Ensure that insulated gloves are worn when carrying out this procedure.
   (1) Remove the 4 bolts and power cable cover.
(2) Remove the 2 bolts from the generator cable.

(3) Inspect the voltage between each of the 3 phase AC terminals (U to V, V to W, U to W) and body ground using the Toyota electrical tester.

**Standard value:**
0 V

**HINT:**
Use the Toyota Electrical Tester on measured ranges of DC 400 volts or more.

(b) Remove the 3 bolts and generator cable.

**INSTALLATION**

1. INSTALL GENERATOR CABLE
   (a) Apply a small amount of ATF WS to the generator cable's O-ring.

(b) Connect the generator cable as shown in the illustration.

**NOTICE:**
- Align the letters U, V and W, and connect the cable.
- Ensure that no foreign objects are attached to the O-ring when connecting the cables.
(c) Install the generator cable (terminals) with the 3 bolts.
Torque: 8.5 N*m (87 kgf*cm, 71 in.*lb)

(d) Install the generator cable with the 2 bolts.
Torque: 5.8 N*m (59 kgf*cm, 51 in.*lb)

(e) Apply seal packing in a continuous line of beads (diameter 1.5 mm (0.059 in.) to the power cable cover.
Seal packing:
Toyota Genuine Seal Packing 1281,
Three Bond 1281 or Equivalent
NOTICE:
• Clean and degrease the installation surfaces.
• Install within 10 minutes of applying seal packing.
• Ensure that no foreign objects are inserted when the power cable cover is attached.

(f) Install the power cable cover with the 4 bolts.
Torque: 4.8 N*m (49 kgf*cm, 42 in.*lb)

2. INSTALL INVERTER WITH CONVERTER ASSEMBLY
(a) Install the inverter with converter (see page HV-535).

3. INSTALL FRONT COWL TOP PANEL OUTER SUB-ASSEMBLY
(a) Install the cowl top front panel (see page FU-19).

4. INSTALL ENGINE UNDER COVER RH
5. INSTALL ENGINE UNDER COVER LH
6. INSTALL SERVICE PLUG GRIP
(a) Install the service plug grip (see page HB-154).

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

8. ADD COOLANT
(a) Add coolant (see page HX-58).
9. **CHECK FOR ENGINE COOLANT LEAKS**  
   (a) Check for engine coolant leaks (see page CO-9).

10. **PERFORM INITIALIZATION**  
   (a) Perform initialization (see page IN-32).  
   **NOTICE:**  
   Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.
SHIFT LEVER

COMPONENTS

- NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY
- UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY
- NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY
- SHIFT LEVER ASSEMBLY
- LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY

\[ N \text{m (kgf*cm, ft.*lbf)} \] : Specified torque
REMOVAL
1. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-5)
2. REMOVE UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-6)
3. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-6)
4. REMOVE SHIFT LEVER ASSEMBLY
   (a) Remove the 3 bolts.
   (b) Disconnect the 2 connectors and remove the shift lever.

DISASSEMBLY
1. REMOVE INDICATOR LIGHT WIRE SUB-ASSEMBLY
   (a) Remove the position indicator light wire from the position indicator housing.
   (b) Remove the cover.
   (c) Disconnect the connector from the 3 clamps and remove the position indicator light wire.
(d) Remove the bulb and cap from the position indicator light wire.

**REASSEMBLY**

1. **INSTALL INDICATOR LIGHT WIRE SUB-ASSEMBLY**
   (a) Install the bulb and cap to the position indicator light wire.

   (b) Connect the connector to the 3 clamps.
   (c) Install the cover.

   (d) Install the position indicator light wire to the position indicator housing.

**NOTICE:**
Securely attach the wire by twisting to the right.
INSTALLATION

1. INSTALL SHIFT LEVER ASSEMBLY
   (a) Connect the 2 connectors to the shift lever.
   (b) Install the shift lever with the 3 bolts.
      Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

2. INSPECT SHIFT LEVER ASSEMBLY
   (a) Inspect the shift lever (see page HX-2).

3. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-13)

4. INSTALL UPPER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-13)

5. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY (See page IP-13)

6. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-13)
OIL PUMP DRIVE SHAFT

COMPONENTS

- OIL PUMP DRIVE SHAFT
- OIL PUMP DRIVEN ROTOR
- TRANSAXLE OIL PUMP DRIVE ROTOR
- TRANSMISSION OIL PUMP COVER SUB-ASSEMBLY
- ENGINE UNDER COVER LH

Non-reusable part: Specified torque

Non-reusable part

Apply ATF WS

N\textcircled{\textbullet}m (kgf\textordmasculine cm, ft.lbf): Specified torque

\textcircled{\textbullet} Non-reusable part

\leftarrow Apply ATF WS
REMOVAL

1. REMOVE FRONT WHEEL LH

2. REMOVE ENGINE UNDER COVER LH

3. DRAIN TRANSAXLE OIL
   (a) Drain transaxle oil (see page HX-1).

4. REMOVE TRANSMISSION OIL PUMP COVER SUB-ASSEMBLY
   (a) Remove the 5 bolts and oil pump cover.

   (b) Remove the O-ring.

5. REMOVE TRANSAXLE OIL PUMP DRIVE ROTOR
   (a) Remove the transaxle oil pump drive rotor from the hybrid vehicle transaxle.

6. REMOVE OIL PUMP DRIVEN ROTOR
   (a) Remove the oil pump driven rotor from the hybrid vehicle transaxle.
7. REMOVE OIL PUMP DRIVE SHAFT
   (a) Remove the oil pump drive shaft from the hybrid vehicle transaxle.

INSTALLATION

1. INSTALL OIL PUMP DRIVE SHAFT
   (a) Apply ATF WS to the oil pump drive shaft and install it to the hybrid vehicle transaxle.
   HINT:
   Use genuine ATF WS.

2. INSTALL OIL PUMP DRIVEN ROTOR
   (a) Apply ATF WS to the oil pump driven rotor and install it to the hybrid vehicle transaxle.
   HINT:
   Use genuine ATF WS.

3. INSTALL TRANSAXLE OIL PUMP DRIVE ROTOR
   (a) Apply ATF WS to the oil pump drive rotor and install it to the hybrid vehicle transaxle.
   HINT:
   Use genuine ATF WS.

4. INSTALL TRANSMISSION OIL PUMP COVER SUB-ASSEMBLY
   (a) Install a new O-ring to the hybrid transaxle.
   NOTICE:
   Do not twist the O-ring when installing it.
(b) Apply adhesive to the first 2 or 3 threads of the bolt end.
   Adhesive:
   Toyota Genuine Adhesive 1344,
   Three Bond 1344 or Equivalent
   NOTICE:
   Clean and degrease the bolts and bolt holes.
(c) Install the oil pump cover with the 5 bolts.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

5. INSTALL FRONT WHEEL

6. ADD TRANSAXLE OIL
   Fluid type:
   Toyota genuine ATF WS
   Standard capacity:
   3.8 liters (4.0 US qts, 3.3 Imp. qts)

7. INSPECT TRANSAXLE OIL
   (a) Inspect transaxle oil (see page HX-1).

8. INSTALL ENGINE UNDER COVER LH
HYBRID TRANSMISSION / TRANSAXLE

HYBRID TRANSMISSION / TRANSAXLE OIL SEAL

COMPONENTS

- FRONT DRIVE SHAFT HOLE SNAP RING
- FRONT DRIVE SHAFT ASSEMBLY RH
- HYBRID VEHICLE TRANSAXLE OIL SEAL
- FRONT DRIVE SHAFT ASSEMBLY LH
- FRONT SPEED SENSOR LH
- TIE ROD END SUB-ASSEMBLY LH
- FRONT AXLE HUB NUT LH
- ENGINE UNDER COVER RH
- ENGINE UNDER COVER LH

Non-reusable part

N*m (kgf*cm, ft.*lbf) : Specified torque

HX–131

C130904E51
REPLACEMENT

1. REMOVE FRONT WHEEL
2. REMOVE ENGINE UNDER COVER LH
3. REMOVE ENGINE UNDER COVER RH
4. DRAIN TRANSAXLE OIL
   (a) Drain transaxle oil (see page HX-1).
5. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH
   (a) Remove the drive shaft (see page DS-7).
6. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH
   (a) Remove the drive shaft (see page DS-7).
7. REMOVE HYBRID TRANSAXLE OIL SEAL
   (a) Using SST, tap out the oil seal.
      SST 09308-00010
8. INSTALL HYBRID TRANSAXLE OIL SEAL
   (a) Apply a small amount of No. 2 MP grease to the lip
       of a new oil seal.
   (b) Using SST, tap in the oil seal to the standard depth.
       Standard depth:
       2.7 ±0.5 mm (0.106 ±0.020 in.)
       SST 09950-70010 (09951-07200), 09350-32014
           (09351-32130, 09351-32150)
9. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH
   (a) Install the front drive shaft (see page DS-15).
10. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH
    (a) Install the front drive shaft (see page DS-15).
11. INSTALL FRONT WHEEL
12. ADD TRANSAXLE OIL
    Fluid type:
    Toyota genuine ATF WS
    Capacity:
    3.8 liters (4.0 US qts, 3.3 Imp. qts)
13. INSPECT TRANSAXLE OIL
    (a) Inspect the transaxle oil level (see page HX-1).
14. INSTALL ENGINE UNDER COVER RH
15. INSTALL ENGINE UNDER COVER LH
16. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
    (a) Inspect and adjust the front wheel alignment (see page SP-2).
17. PERFORM CALIBRATION
   (a) Perform calibration (see page PS-13).
INPUT SHAFT OIL SEAL

COMPONENTS

- Non-reusable part
REPLACEMENT

CAUTION:
- When working on the high voltage systems, always wear insulated gloves.
- Keep the removed service plug in your pocket to prevent other technicians from reconnecting it while you are servicing the vehicle.
- After removing the service plug grip, do not touch the high voltage connectors and terminals for 5 minutes.

NOTICE:
After removing the service plug, do not operate the power switch as it may damage the hybrid vehicle control ECU.

1. REMOVE HYBRID VEHICLE TRANSAXLE ASSEMBLY
   (a) Remove the hybrid vehicle transaxle (see page HX-66).

2. REMOVE INPUT SHAFT OIL SEAL
   (a) Insert a flat-head screwdriver into the metal portion of the oil seal and pry out the oil seal.
   NOTICE:
   Do not damage the input shaft and transaxle housing when inserting the screwdriver or removing the oil seal.

3. INSTALL INPUT SHAFT OIL SEAL
   (a) Apply a small amount of No. 2 MP grease to the lip of a new oil seal.
   (b) Using SST, install the oil seal.
       SST 09388-40010
       Standard depth: 1.0 to 1.5 mm (0.039 to 0.059 in.)
   NOTICE:
   • Ensure that no foreign objects adhere to the oil seal lip.
   • Ensure that the oil seal is not at an angle.

4. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY
   (a) Install the hybrid vehicle transaxle (see page HX-70).
