POWER STEERING SYSTEM

PRECAUTION

1. HANDLING PRECAUTIONS FOR SRS AIRBAG SYSTEM (SEE PAGE RS-1)
   NOTICE:
   Some service operations affect the SRS airbag. Be sure to read the precautionary notice for the SRS airbag before servicing.

2. PRECAUTIONS FOR REMOVAL, INSTALLATION AND REPLACEMENT OF ELECTRONIC MOTOR POWER STEERING COMPONENTS
   (a) Be sure to align the front wheels straight ahead when removing and installing the steering gear assembly.
   (b) When disconnecting the sliding yoke of the steering column and the pinion shaft of the steering gear assembly, be sure to put matchmarks before starting the operation.
   (c) When any component related to the steering system has been removed and either reinstalled or replaced, perform the steering center point adjustment (zero point calibration) (see page RS-31).
   (d) When disconnecting the connector related to the electronic motor power steering wheel, turn the power switch ON (IG) (the engine and the hybrid system are not stopped), center the steering wheel, turn the power switch OFF, and then disconnect the connector.
   (e) When reconnecting the connector related to the electronic motor power steering system, ensure that the power switch is OFF. Center the steering wheel and then turn the power switch ON (IG) (the engine and the hybrid system are not stopped).
   NOTICE:
   Do not turn the power switch ON (IG) (the engine and the hybrid system are not stopped) when the steering wheel is not centered.
   (f) If the procedures above are not performed out properly, the steering center point (zero point) will deviate, which may lead to a difference in steering effort between right and left. If there is a difference in steering effort between right and left, perform the steering center point adjustment (zero point calibration) (see page RS-31).
   NOTICE:
   FOR INITIALIZATION
   When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

<table>
<thead>
<tr>
<th>System Name</th>
<th>See Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Window Control System</td>
<td>IN-32</td>
</tr>
</tbody>
</table>
NOTICE:
FOR HYBRID SYSTEM ACTIVATION
• When the warning light is illuminated or the battery has been disconnected and reconnected, pressing the power switch may not start the system on the first try. If so, press the power switch again.
• With the power switch’s power mode changed to ON (IG), disconnect the battery. If the key is not in the key slot during reconnection, DTC B2799 may be output.
SYSTEM DESCRIPTION

- A rack and pinion type steering gear is used on all models.
- The PRIUS uses a vehicle-speed sensing type EPS (Electric Power Steering) on all models.
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the cause of the problem. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

<table>
<thead>

ON-VEHICLE INSPECTION

1. CHECK STEERING EFFORT (TORQUE)

   NOTICE:
   Some service operations affect the SRS airbag. Be sure to read the precautionary notice for the SRS airbag before servicing.

   (a) Stop the vehicle on a level, paved road and align the wheels straight ahead.
   (b) Disconnect the cable from the negative (-) battery terminal.
   (c) Remove the steering pad (see page RS-267).
   (d) Connect the cable to the negative (-) battery terminal.
   (e) Using a torque wrench, check if the steering wheel set nut is properly tightened.
       Torque: 50 N•m (510 kgf•cm, 37 ft•lbf)
   (f) Turn the power switch ON (IG) (the engine and the hybrid system are not operated) so that power steering is ready to operate.
   (g) Turn the steering wheel 90 degrees to the right and check steering effort (torque) while turning. Check in the opposite direction using the same procedure.
       Steering effort (Reference):
       5.5 N•m (56 kgf•cm, 49 in•lbf)
   (h) Align the front wheels straight ahead.
   (i) Disconnect the cable from negative (-) battery terminal.
   (j) Install the steering pad assembly (see page RS-268).
   (k) Connect the cable to the negative (-) battery terminal.
   (l) Clear the DTCs (see page RS-38).
   (m) Perform initialization (see page IN-32).
   (n) Inspect the airbag warning light (see page RS-31).

2. CHECK STEERING WHEEL FREE PLAY

   (a) Turn the power switch ON (IG) so that power steering is ready to operate.
   (b) Align the wheels straight ahead.
   (c) Gently turn the steering wheel right and left with your finger and check the steering wheel free play.
       Maximum free play:
       30 mm (1.18 in.)
       If the free play is out of specification, replace the sliding yoke sub-assembly or steering gear assembly with a new one.
ELECTRONIC POWER STEERING SYSTEM

PRECAUTION

1. FOR INITIALIZATION NOTICE:
When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

<table>
<thead>
<tr>
<th>System Name</th>
<th>See procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Power Window Control System</td>
<td>IN-32</td>
</tr>
</tbody>
</table>

2. FOR HYBRID SYSTEM ACTIVATION NOTICE:
- When the warning light is illuminated or the battery has been disconnected and reconnected, pressing the power switch may not start the system on the first try. If so, press the power switch again.
- With the power switch's power mode changed to ON (IG), disconnect the battery. If the key is not in the key slot during reconnection, DTC B2799 may be output.

3. HANDLING PRECAUTIONS
   (a) When handling the electronic parts:
      (1) Avoid any impact to electronic parts such as ECUs and relays. Replace the parts with new ones if dropped or subjected to a severe impact.
      (2) Do not expose any electronic parts to high temperature and humidity.
      (3) Do not touch the connector terminals in order to prevent deformation or malfunctions due to static electricity.
      (4) When the power steering ECU has been replaced with a new one, perform the torque sensor zero point calibration (see page PS-13).
   (b) When handling the steering column:
      (1) Avoid any impact to the steering column, especially to the motor or torque sensor. Replace the parts with new ones if dropped or subjected to a severe impact.
      (2) Do not pull on the wire harness when moving the steering column.
      (3) When the steering column has been replaced, perform the torque sensor zero point calibration after initializing the torque sensor zero point calibration signal (see page PS-13).
   (c) When disconnecting and reconnecting the connectors:
      (1) When disconnecting a connector related to the electric power steering system, turn the power switch ON (IG), center the steering wheel, turn the power switch OFF, and then disconnect the connector.
(2) When reconnecting a connector related to the electric power steering system, ensure that the power switch is OFF. Center the steering wheel and then turn the power switch ON (IG).

**NOTICE:**
Do not turn the power switch ON (IG) when the steering wheel is not centered.

(3) If the above operations are not carried out properly, the steering center point (zero point) will deviate, which may lead to a difference in right and left steering effort. If there is a difference in right and left steering effort, perform the torque sensor zero point calibration (see page PS-13).

4. **PRECAUTIONS FOR CAN COMMUNICATION**

   (a) CAN communication is used to receive information from the skid control ECU and to transmit warnings to the meter and the multi-display. When there are any problems in the CAN communication lines, DTCs indicating the communication line malfunctions are output.

   (b) Perform troubleshooting for the communication line problems when the CAN communication DTCs are output. Be sure to start troubleshooting on the electronic power steering system when data communication is normal.

   (c) A temporary fix or repair with bypass wiring, etc. is impossible because the length and path of each CAN communication line is specific.

SYSTEM DESCRIPTION

1. DESCRIPTION
   (a) The electronic power steering system generates torque through the operation of the motor and the reduction gear installed on the column shaft in order to assist steering effort. Directions and amount of assisting power are determined by signals from the torque sensor built into the steering column assembly and by the power steering ECU, and controlled in accordance with vehicle speed. As a result, steering effort is controlled to be light during low speed driving and moderately high during high speed driving.

   (1) Power steering ECU:
   The power steering ECU calculates assisting power based on a steering torque signal from the torque sensor and a vehicle speed signal from the skid control ECU. It generates specified assisting torque by controlling current to the motor.

   (2) Torque sensor:
   The torque sensor detects steering effort generated when the steering wheel is turned and converts it to an electrical signal.

   (3) Power steering motor:
   The power steering motor is activated by the current from the power steering ECU and generates torque to assist steering effort.
HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
• Use these procedures to troubleshoot the Electronic Power Steering System (EPS).
• *: Use the intelligent tester.

<table>

CALIBRATION

1. INITIALIZATION OF TORQUE SENSOR ZERO POINT CALIBRATION SIGNAL

NOTICE:
Under the following conditions, perform the torque sensor zero point calibration after initializing the torque sensor zero point calibration signal in the ECU:

- The steering column (containing the torque sensor) has been replaced.
- The power steering ECU has been replaced.
- The steering wheel has been replaced.
- The steering gear assembly has been replaced.
- There is a difference in right and left steering effort.

(a) Center the steering wheel and align the front wheels straight ahead.
(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the power switch ON (IG) and then initialize the torque sensor zero point calibration signal by following the directions on the tester screen.

NOTICE:
Do not turn the steering wheel while initializing the zero point calibration signal.

(d) Perform steering zero point calibration after turning the power switch OFF.

NOTICE:
Zero point calibration cannot be carried out with the power switch ON (IG) after initialization of the zero point calibration signal is completed.
DIAGNOSTIC MENU EMPS

1: DATA LIST
2: DTC INFO
4: SNAPSHOT
5: TRQ SENSOR ADJ
6: RECORDS CLEAR
7: SIGNAL CHECK

CAUTION

If the ECU has been exchanged, execute ZERO POINT ADJUST.
Otherwise, execute ZERO POINT INIT before executing ZERO POINT ADJUST.

Press [ENTER]

TORQUE SENSOR ZERO POINT ADJUSTMENT ECU: EMPS

1. ZERO POINT INIT
2. ZERO POINT ADJ

"ENTER"

ZERO POINT INIT ECU: EMPS

Do you wish to start this function?

Press [Yes] or [No]

"Yes"
2. TORQUE SENSOR ZERO POINT CALIBRATION
   (a) Center the steering wheel and align the front wheels straight ahead.
   (b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the power switch ON (IG) and then perform the zero point calibration by following the directions on the tester screen.

**NOTICE:**
- The vehicle is stopped.
- Do not start the engine. (Do not turn the power switch ON (READY).)
- Do not turn the steering wheel.
- The vehicle is on level ground.

(d) Confirm that no DTCs are output after completing the operation.

1. When DTC C1515 is output, refer to the following procedures (see page PS-32).
2. When DTC C1516 is output, refer to the following procedures (see page PS-33).
3. When DTC C1534 is output, refer to the following procedures (see page PS-36).
**Diagnostic Menu**

HINT:
If the result is not as specified, the ECU may have a malfunction.

**DIAGNOSIS SYSTEM**

1. **CHECK DLC3**
The vehicle’s ECU uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with ISO 15031-03 and matches the ISO 15765-4 format.

**NOTICE:**
*: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, other switches or the doors. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.
HINT:
Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch ON (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction.

2. WARNING LIGHT
(a) When a problem occurs in the electric power steering system, the PS warning is indicated on the multi-display and the master warning light on the combination meter comes on to inform the driver of the problem.

DTC CHECK / CLEAR

1. CHECK DTC
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch ON (IG).
(c) Read the DTCs by following the display on the intelligent tester.
   HINT:
   Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC
(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch ON (IG).
(c) Clear the DTCs by following the display on the intelligent tester.
   HINT:
   Refer to the intelligent tester operator's manual for further details.
FREEZE FRAME DATA

NOTICE:
- It is difficult to show the specified values (judgment values) clearly because freeze frame data values significantly change due to differences in measurement conditions, surroundings or vehicle conditions. Because of this reason, there may be a problem even when the values are within specifications.
- Turn the power switch ON (IG) and park the vehicle on level ground to check the freeze frame data using the intelligent tester.
  1. Connect the intelligent tester (with CAN VIM) to the DLC3.
  2. Turn the power switch ON (IG) and check the freeze frame data by following the prompts on the display of the intelligent tester.

**FAIL-SAFE CHART**

When a problem occurs in the electronic motor power steering system, the P/S warning is indicated on the multi-display, the master warning light on the combination meter comes on, and steering power assist is stopped, fixed at a particular point, or decreased simultaneously to protect the system.

</tr>
<tr>
<td>-</td>
<td>Power source voltage drop</td>
<td>Power assist is interrupted, but normal power assist is resumed when voltage returns.</td>
</tr>
</tbody>
</table>

**HINT:**

Amount of power assist may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In that case, the amount of power assist returns to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.
DATA LIST / ACTIVE TEST

1.  READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
(a)  Connect the intelligent tester (with CAN VIM) to the DLC3.
(b)  Turn the power switch ON (IG) and press the intelligent tester main switch on.
(c)  Read the DATA LIST by following the directions on the tester screen.

DESCRIPTION
The torque sensor converts rotation torque input to the steering wheel into an electrical signal and sends it to the ECU. Based on this signal, the ECU detects steering effort.

WIRING DIAGRAM

[Diagram of Torque Sensor and Power Steering ECU with connections to TRQV, TRQ1, TRQ2, TRQG]
INSPECTION PROCEDURE

1. READ VALUE OF INTELLIGENT TESTER (TORQUE SENSOR)

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch ON (IG), and turn the intelligent tester main switch on.
(c) Select the items "TRQ1" and "TRQ2" in the DATA LIST.

(d) Read the values of "TRQ1" and "TRQ2" on the tester display when the steering wheel is centered (without load).

<table>
<thead>
<tr>
<th>Inspect Condition</th>
<th>Reference Value</th>
</tr>
</thead>
<tbody>
<tr>

   **HINT:**
   Replace the steering column assembly if DTCs are still output even after performing the torque sensor zero point calibration 3 times.

   B  [Go to step 2]

   C  [END]

   **REPLACE STEERING COLUMN ASSEMBLY**
**DESCRIPTION**
This DTC does not indicate a malfunction. The power steering ECU outputs this DTC when it determines that the torque sensor zero point calibration has not been completed normally.

**INSPECTION PROCEDURE**

1. **CLEAR DTC**
   - (a) Clear the DTC (see page PS-23).

2. **PERFORM ZERO POINT CALIBRATION OF TORQUE SENSOR**
   - (a) Perform the torque sensor zero point calibration (see page PS-13).

3. **RECONFIRM DTC**
   - (a) Check for DTCs.
     - **Result**
       - **Result** | **Proceed to**
       - DTCs are still output even after performing torque sensor zero point calibration 3 times. | A
       - DTCs are still output even after performing torque sensor zero point calibration once or twice. | B
       - Normal system code is output. | C
     
   **HINT:**
   Replace the steering column assembly if DTCs are still output even after performing the torque sensor zero point calibration 3 times.

   - B  |  **Go to step 2**
   - C  |  **END**

**REPLACE STEERING COLUMN ASSEMBLY**
DESCRIPTION
The power steering ECU supplies current to the power steering motor through this circuit.

REPLACE POWER STEERING ECU
PS–38
POWER STEERING – ELECTRONIC POWER STEERING SYSTEM

### DESCRIPTION

Fail-safe function operates to stop power assist while DTCs indicating ECU malfunctions are output. However, power assist continues when DTC C1534 is output because it indicates an EEPROM error in the ECU.

<table>
<thead>
<tr>

REPLACE POWER STEERING ECU
DESCRIPTION
When a problem occurs in the system, the power source relay (built into the power steering ECU) circuit and the motor relay (built into the power steering ECU) circuit are shut off to stop power assist. It is necessary to replace the ECU when there is a problem in the relay because each relay is built into the ECU.

REPLACE POWER STEERING ECU
**DESCRIPTION**

The power steering ECU outputs this DTC when it determines that assist map is not written in the ECU. It is necessary to replace the power steering ECU when this code is output because this malfunction cannot be repaired.

**HINT:**
The assist map is data written in the power steering ECU to control assisting power. The assist map is selected from four types based on the vehicle specification communication data (designation and grade package information).

<table>
<thead>
<tr>
<th>DTC No.</th>
<th>DTC Detection Condition</th>
<th>Trouble Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>C1581</td>
<td>Assist map is not written in the power steering ECU.</td>
<td>Power steering ECU</td>
</tr>
</tbody>
</table>

**INSPECTION PROCEDURE**

1. **RECONFIRM DTC**

   (a) Check for DTCs.

   **OK:**
   DTCs other than C1581 are not output.

   **NG**
   REPAIR CIRCUIT INDICATED BY OUTPUT CODE

**OK**

**REPLACE POWER STEERING ECU**
DESCRIPTION
The power steering ECU receives signals from the skid control ECU (ECB ECU) via CAN communication.

<table>
<thead>
<tr>
<th>DTC No.</th>
<th>DTC Detection Condition</th>
<th>Trouble Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>U0073</td>
<td>CAN communication error (CAN bus is off)</td>

F100827E03
INSPECTION PROCEDURE

1  CHECK DTC

(a) Using the intelligent tester (with CAN VIM), check for DTCs.
   OK:
   DTC is not output.

   OK  PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

   NG  GO TO CAN COMMUNICATION SYSTEM TROUBLESHOOTING
PS Warning is Always Shown on Multi-Display

DESCRIPTION
The troubleshooting procedure for a situation when no DTCs are output but a PS warning is always indicated is specified here. The PS warning remains on when there is an open in the IG circuit that inputs power source voltage to the power steering ECU.
INSPECTION PROCEDURE

1 CHECK CONNECTOR CONNECTION CONDITION

(a) Check the indication condition of the PS warning while wiggling the power steering ECU connector and wire harness up and down, and right and left.

   OK:
   Warning indication does not change.

   NG  REPAIR OR REPLACE HARNESS AND CONNECTOR

2 INSPECT CAN COMMUNICATION SYSTEM

(a) Using the intelligent tester (with CAN VIM), check for DTCs and confirm that there are no problems in the CAN communication system.

   OK:
   DTCs are not output.

   NG  GO TO CAN COMMUNICATION SYSTEM

3 INSPECT MULTIPLEX COMMUNICATION SYSTEM (BEAN)

(a) Using the intelligent tester (with CAN VIM), check for DTCs and confirm that there are no problems in the multiplex communication system (BEAN).

   OK:
   DTCs are not output.

   NG  GO TO MULTIPLEX COMMUNICATION SYSTEM

4 CHECK WIRE HARNESS (POWER STEERING ECU - BATTERY)

(a) Disconnect the P7 and P8 power steering ECU connectors.
(b) Turn the power switch ON (IG).
(c) Measure the voltage of the wire harness side connectors.

   Standard voltage

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>P8-6 (IG) - P7-2 (PGND)</td>
<td>Power switch ON (IG)</td>
<td>10 to 16 V</td>
</tr>
</tbody>
</table>
NG → REPAIR OR REPLACE HARNESS AND CONNECTOR

OK

5. REPLACE POWER STEERING ECU

NEXT

6. CHECK PS WARNING ON MULTI-DISPLAY

(a) Check for the PS warning indication on the multi-display.

OK:
PS warning is not indicated.

OK → END

NG

REPLACE MULTI-DISPLAY
STEERING GEAR

COMPONENTS

N*m (kgf*cm, ft.*lbf) : Specified torque
Non-reusable part: Specified torque N*m (kgf*cm, ft.*lbf)

- 35 (360, 26)
- 49 (500, 36)
- 58 (591, 43)
- 60 (612, 44)
- 74 (749, 54)

*For use with SST

Molybdenum disulfide lithium base grease
Silicon grease
REMOVAL

1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

3. REMOVE COLUMN HOLE COVER SILENCER SHEET
   (See page SR-10)

4. SEPARATE STEERING SLIDING YOKE SUB-ASSEMBLY
   (a) Fix the steering wheel with the seat belt in order to prevent rotation and damage to the spiral cable.
   (b) Put matchmarks in the sliding yoke and intermediate shaft.
   (c) Loosen the bolt labeled A and remove the bolt labeled B to separate the sliding yoke.

5. DISCONNECT NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY
   (a) Remove the clip labeled A and disconnect the hole cover from the body.
   NOTICE:
   Do not damage the clip labeled B.

6. REMOVE FRONT WHEELS

7. DISCONNECT NO. 2 TIE ROD END SUB-ASSEMBLY
   (See page DS-6)

8. DISCONNECT NO. 1 TIE ROD END SUB-ASSEMBLY
   HINT:
   Use the same procedure described for the No. 2 tie rod end.

9. REMOVE FRONT STABILIZER LINK ASSEMBLY LH
   (See page SP-28)

10. REMOVE FRONT STABILIZER LINK ASSEMBLY RH
    HINT:
    Use the same procedure described for the LH.
11. REMOVE FRONT NO. 1 STABILIZER BRACKET LH
   (See page SP-28)

12. REMOVE FRONT NO. 1 STABILIZER BRACKET RH
   HINT:
   Use the same procedure described for the LH.

13. REMOVE STEERING INTERMEDIATE SHAFT
   (a) Move the No. 1 column hole cover to the upper side
       of the vehicle and put matchmarks on the
       intermediate shaft and steering gear.
       NOTICE:
       Do not damage the No. 1 hole cover when
       moving it.
   (b) Remove the bolt and remove the intermediate shaft
       from the inside of the vehicle.
   (c) Remove the No. 1 column hole cover from the
       steering gear.
       NOTICE:
       Do not damage the No. 1 hole cover clip.

14. REMOVE STEERING GEAR ASSEMBLY
   (a) Remove the 4 bolts and steering gear from the left
       side of the vehicle.
   HINT:
   Be careful not to hit the stabilizer bar when
   removing the steering gear.

DISASSEMBLY

1. FIX STEERING GEAR ASSEMBLY
   (a) Using SST wrapped with protective tape, secure the
       steering gear in a vise.
       SST 09612-00012
   HINT:
   Remove and reinstall the SST as needed.

2. REMOVE TIE ROD END SUB-ASSEMBLY LH
   (a) Put matchmarks on the tie rod end LH and rack end.
   (b) Remove the tie rod end LH and lock nut.

3. REMOVE TIE ROD END SUB-ASSEMBLY RH
   HINT:
   Use the same procedure described for the LH.

4. REMOVE STEERING RACK BOOT CLIP
   (a) Using pliers, remove the 2 rack boot clips (for RH
       and LH).
5. REMOVE NO. 2 STEERING RACK BOOT CLAMP
   (a) Using a screwdriver, unstake and remove the clamp.
   **NOTICE:**
   Do not damage the boot.

6. REMOVE NO. 1 STEERING RACK BOOT CLAMP
   **HINT:**
   Use the same procedures described for the No. 2 rack boot clamp.

7. REMOVE NO. 2 STEERING RACK BOOT

8. REMOVE NO. 1 STEERING RACK BOOT

9. REMOVE STEERING RACK END SUB-ASSEMBLY
   (a) Using 2 SST, remove the rack end (for LH side).
   **SST 09922-10010**
   **NOTICE:**
   - Use SST in the correct direction as shown in the illustration.
   - Securely hold the steering rack.

   (b) Using 2 SST, hold the steering rack LH side and remove the rack end (for RH side).
   **SST 09922-10010**
   **NOTICE:**
   - Use SST in the correct direction as shown in the illustration.
   - Securely hold the steering rack.
INSPECTION

1. INSPECT TIE ROD END SUB-ASSEMBLY LH
   (a) Secure the tie rod end LH boll join in a vise through aluminum plates.
      NOTICE:
      Do not overtighten the vise.
   (b) Install the castle nut to the stud bolt.
   (c) Flip the ball joint back and forth 5 times or more.
   (d) Set a torque wrench to the nut, turn the ball joint continuously at a rate of 3 to 5 seconds per turn, and check the turning torque on the 5th turn.
      Standard turning torque:
      2.0 N*m (20.4 kgf*cm, 18 in. lbf) or less
      If turning torque is out of specification, replace the tie rod end LH with a new one.

2. INSPECT TIE ROD END SUB-ASSEMBLY RH
   HINT:
   Use the same procedures described for the LH side.

3. INSPECT TOTAL PRELOAD
   (a) Using SST, inspect the total preload.
      SST 09616-00011
      Standard total preload (turning):
      0.6 to 1.2 N*m (6.2 to 12.2 kgf*cm, 5 to 11 in.*lbf)
      NOTICE:
      Inspect around the steering rack center position.
      If the total preload is out of specification, replace the steering gear with a new one.

REASSEMBLY

1. INSTALL STEERING RACK END SUB-ASSEMBLY
   (a) Fill up the ball joints of the RH and LH rack ends with molybdenum disulfide lithium base grease.
   (b) Using 2 SST, hold the steering rack LH side and install the rack end (for RH side).
      SST 09922-10010
      Torque: 60 N*m (612 kgf*cm, 44 ft.*lbf)
      NOTICE:
      • Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).
      • Use SST in the correct direction as shown in the illustration.
      • Securely hold the steering rack.
2. INSTALL NO. 2 STEERING RACK BOOT
   (a) Apply silicon grease to the inside of the small opening of the boot.
   (b) Install the boot in the groove on the rack housing.
   **NOTICE:**
   Make sure that the boot is not twisted.

3. INSTALL NO. 1 STEERING RACK BOOT
   **HINT:**
   Use the same procedures described for the No. 2 boot.

4. INSTALL NO. 2 STEERING RACK BOOT CLAMP
   (a) Install a new clamp to the boot.
   **NOTICE:**
   Do not damage the boot.
   (b) While pushing SST to the rack housing, pinch the clamp so that the clearance is within specification.
   **SST 09521-24010**
   **Standard clearance:**
   3.0 mm (0.12 in.) or less
   **NOTICE:**
   Make sure that the boot is not twisted.

5. INSTALL NO. 1 STEERING RACK BOOT CLAMP
   **HINT:**
   Use the same procedures described for the No. 2 rack boot clamp.

6. INSTALL STEERING RACK BOOT CLIP
   (a) Using pliers, install the 2 rack boot clips to the RH and LH rack boots.

7. INSPECT STEERING GEAR ASSEMBLY
   (a) Using SST, turn the pinion shaft and check that the RH and LH rack boots expand and contract smoothly, reinstall it with a new rack boot clamp.
   **SST 09616-00011**
   If the rack boot does not expand and contract smoothly, reinstall it with a new rack boot clamp.
8. INSTALL TIE ROD END SUB-ASSEMBLY LH
   (a) Screw the lock nut and tie rod end LH on the rack end unit the matchmarks are aligned and temporarily tighten the lock nut.
      HINT:
      Fully tighten the lock nut after adjusting toe-in.

9. REMOVE TIE ROD END SUB-ASSEMBLY RH
   HINT:
   Use the same procedures described for the LH side.

INSTALLATION

1. INSTALL STEERING GEAR ASSEMBLY
   (a) Install the steering gear from the left side of the vehicle.
      HINT:
      Be careful not to hit the stabilizer bar when installing the steering gear.
   (b) Install the No. 1 column hole cover to the steering gear.
   (c) Install the steering gear to the crossmember with the 4 bolts.
      Torque: 58 N*m (591 kgf*cm, 43 ft.*lbf)

2. INSTALL STEERING INTERMEDIATE SHAFT
   (a) Move the No. 1 column hole cover to the upper side of the vehicle, align the matchmarks, and install the intermediate shaft from the inside of the vehicle.
      NOTICE:
      Do not damage the No. 1 hole cover when moving it.
   (b) Install the bolt.
      Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)
   (c) Fit the recessed part on the No. 1 column hole cover to the steering gear.
      NOTICE:
      Make sure that the No. 1 hole cover is securely installed.

3. INSTALL FRONT NO. 1 STABILIZER BRACKET LH
   (See page SP-29)

4. INSTALL FRONT NO. 1 STABILIZER BRACKET RH
   HINT:
   Use the same procedures described for the LH side.

5. INSTALL FRONT STABILIZER LINK ASSEMBLY LH
   (See page SP-30)

6. INSTALL FRONT STABILIZER LINK ASSEMBLY RH
   HINT:
   Use the same procedures described for the LH side.

7. CONNECT NO. 1 TIE ROD END SUB-ASSEMBLY (See page DS-16)
8. CONNECT NO. 2 TIE ROD END SUB-ASSEMBLY
HINT:
Use the same procedures described for the No. 1 tie rod end.

9. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

10. INSTALL NO. 1 STEERING COLUMN HOLE COVER SUB-ASSEMBLY
(a) Install the clip labeled B to the vehicle body and install the No. 1 column hole cover to the vehicle body with the clip labeled A.
NOTICE:
Make sure that the lip of the No. 1 hole cover fits on the dash panel correctly.

11. INSTALL STEERING SLIDING YOKE SUB-ASSEMBLY
(a) Align the matchmarks and install the sliding yoke to the intermediate shaft with the bolt labeled B.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)
(b) Tighten the bolt labeled A.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)

12. INSTALL COLUMN HOLE COVER SILENCER SHEET

13. REPLACE FRONT WHEELS FACING STRAIGHT AHEAD

14. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(a) Inspect and adjust the front wheel alignment (see page SP-2).

15. PERFORM STEERING ANGLE SENSOR ZERO POINT CALIBRATION
(a) Perform initialization (see page IN-32).
NOTICE:
Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.
